جامعة الملك عبدالعزيز
King Abdulaziz University

INVENT THE FUTURE

King Abdulaziz University's academic credentials are unmatched in the Arab world, and you can play a leading role in the institution's ongoing pursuit of excellence.

Research is the lifeblood of the higher education space. That's why independent, cutting-edge research is at the heart of everything King Abdulaziz University does.

To help facilitate Saudi Arabia's Vision 2030 programme, KAU is aiming to be ranked among the world's top 100 universities, driven by a culture of innovation and invention.

To achieve this the university is committed to the creation of specialised course programmes that support the world's economic needs – both today and in the future.

By taking a leading role in community service through the application of modern technologies and robust academic standards, KAU is pursuing social outcomes for the benefit of individuals locally and around the world.

Join KAU and transform your ideas into impact through one of its research programmes.

Visit www.KAU.edu.sa to find out how you can become a part of KAU

CHANGING THE FUTURE OF PLASTIC RECYCLING.

A unique partnership between Edith Cowan University engineers and Connop Metal, a Western Australian scrap metal merchant, aims to develop a world-first method of converting recycled PVC into membranes.

The research seeks to overcome the traditional challenges in recycling PVC and to implement a viable conversion technology.

ECU Associate Professor Amir Razmjou says that recycling PVC materials is an important step towards sustainability, and it can have a significant impact on reducing waste that ends up in landfill or the ocean.

Edith Cowan University in Western Australia is emerging as a leader across a diverse range of research areas.

“There are unsung heroes that are not recognised by traditional research metrics”

Universities make trustworthy stewards

Locale determines the mission of many universities. The Impact Rankings recognise how such diversity and community-mindedness spurs progress

One of the virtues of the *Times Higher Education* Impact Rankings is its recognition of the differing missions and strengths of universities.

While it uses the United Nations' 17 Sustainable Development Goals as a framework, institutions do not need to submit data against all the goals to be included. They need to provide information on only one SDG to join the exercise, and four SDGs (including SDG 17) to be ranked in the overall table – meaning that different universities are scored based on a different set of SDGs, depending on their focus.

In this way, these rankings celebrate diversity, recognising that there is not one single definition of excellence and that it is the collective strength of the global higher education sector that will help to build a more sustainable, collaborative and global future.

This year's results show that some university systems are emerging as leaders when it comes to particular SDGs. The UK, for example,

is home to several top performers for responsible consumption and production (SDG 12), while South Korea is particularly active when it comes to decent work and economic growth (SDG 8). Our analysis explores the strategies behind the success of some of those beacons of excellence.

But the 17 SDGs are just one way in which the focus of universities differs when it comes to making an impact. Another way is the types of activities at institutions.

Traditionally, when one thinks of the work of universities, it is their research and their teaching that first come to mind. Both of those areas are examined in the Impact Rankings, but we also measure stewardship – how universities steer their own ships in terms of sustainability – and outreach – the work that universities do with their local, regional, national and international communities.

This year, our data scientists have conducted a new analysis, exploring how performance compares across those four different pil-

lars, at the continent, country and university levels.

There are unsung heroes that are not recognised by traditional research metrics, but are walking the talk on sustainability when it comes to their own operations and community partnerships. There are also institutions that are renowned for their research prowess but still have a long way to go when it comes to getting their own houses in order.

A Nigerian university comes out top globally for both outreach and stewardship, reflecting a broader trend of African universities rising significantly in representation and in performance in the rankings.

There has been rapid growth elsewhere, too, with 2,152 universities from 125 countries/regions featuring in this year's tables. India is now the most-represented nation, followed closely by Turkey and Pakistan.

We are delighted that we can showcase the vital work of all these universities in these rankings, and the diverse ways that they are delivering transformational impact. ●

National champions

Universities have helped some countries become leaders in fields linked to specific SDGs, thanks to their outreach efforts, meticulous data collection and creative campus/community initiatives. Rosa Ellis takes their measure

“Germany has a strong tradition of technically oriented universities, with particularly numerous strong engineering institutes”

It is the sixth year of the *Times Higher Education* Impact Rankings, and they show clearly that the university sector is having an outsized impact on the world’s progress towards the United Nations’ Sustainable Development Goals (SDGs).

That said, some institutions and regions are making more progress than others. Oceania, in particular Australia, is a region that takes sustainability extremely seriously. We see this each year when the tables are published, and 2024 is no different. Looking at the overall table, Australian universities now take four of the top 10 spots, up from three in 2023.

This year, another trend has begun to emerge: some countries are showing great leadership when it comes to particular SDGs. Here, we explore those beacons of excellence and the strategies behind the success.

Industry, innovation and infrastructure: a German story

Investment in infrastructure is crucial to achieving sustainable development, and German universities are world leaders in this area.

As well as measuring research output linked to industry, the table for SDG 9 (industry, innovation and infrastructure) tracks the patents that cite a university’s work, university spin-offs and the amount of research income that comes from industry.

Five German universities have perfect scores in this table: RWTH Aachen University, the Technical University of Munich, TU Dresden, the University of Erlangen-Nuremberg and the University of Stuttgart.

“One key factor why German universities generally perform well in SDG 9 can be attributed to the strong tradition of technically oriented universities, with particularly numerous strong engineering insti-

tutes. Here, alongside basic research, collaborative research with industry partners has long been strongly promoted,” says Peter Middendorf, vice-rector for knowledge and technology transfer at the University of Stuttgart.

One particularly successful initiative at Stuttgart is a campus called ARENA2036, which enables joint research and collaboration between people from industry and academia on-site, “on an equal footing”. Several large regional and national companies, as well as smaller firms and start-ups, contribute their expertise and outline their needs. Crucially, the collaboration is underpinned by a legal framework that means “the question of who owns what is developed is clearly regulated”.

The university also invests in the development of spin-offs, from teaching about the process and offering coaching and consulting to

providing nationally and internationally oriented accelerator programmes.

The University of Erlangen-Nuremberg also credits a focus on innovation for its high score in this table. The institution says its location is helpful – it is right next door to large companies such as Siemens and Adidas – and Erlangen was recently rated the best German city for innovation.

The university co-founded an innovation hub called ZOLLHOF, which was recently ranked among Europe's top 50 by the *Financial Times*. It also invests heavily in in-

house consulting services for business founders.

“We [initiate] competitive formats, from hackathons to elevator pitches, and accompany our students on their way towards a successful business plan, seed money and business angel support,” says Joachim Hornegger, the university's president.

He adds that his institution does “not draw the line too strictly between fundamental research and application”.

“Both are in our focus, and basic research is heavily driven by questions in applied research,” he says.

Responsible consumption and production: the UK dominates

The efficient use of resources and the minimisation of waste will never be achieved without the support of the university sector, but which regions are setting the pace globally? When it comes to SDG 12 (responsible consumption and production), the UK is especially strong, taking eight of the top 10 places, as well as one-third of the top 100 positions.

Bournemouth University and King's College London jointly top the table, followed by the University of Reading in third. The universities of Sheffield, Plymouth, Exeter and Manchester and Swansea University also make the top 10.

As well as measuring research on the topic, this table looks at operational measures in relation to responsible consumption and production, a university's proportion of recycled waste, and whether the institution publishes a sustainability report.

THE spoke to some of the universities leading the pack, and a few themes emerged: one is the importance of having someone senior take a lead on the strategy; another is being meticulous about setting targets and tracking progress with data.

At Bournemouth, for example, the institution knows “exactly how much [waste] we produce and where it goes”, says Lois Betts, its sustainability manager.

UK universities are especially good at ensuring that their supply chains, as well as their own institutions, are as sustainable as possible, and all emphasise the importance of applying principles of the circular economy in their policies.

“The carbon emissions in our supply chain come from all over the world,” says Rosalind Farrow, carbon data manager at the University

PICTURES: GETTY IMAGES

of Sheffield. “Materials may be grown or mined on one continent, refined on another and turned into a finished product somewhere else, before finally being shipped to the UK. Supply chain carbon emissions are, therefore, our opportunity to influence global carbon emissions, rather than just those from our own operations.”

Using unique initiatives to tackle specific types of waste was also a common activity. At Swansea, for example, there are separate recycling facilities for less commonly reused items such as stationery. And at King's, staff who need furniture must check if the item they want is available in an internal furniture reuse platform before they can purchase something new. So far, this has diverted 1,855kg of waste from landfill, reduced emissions by 4,909kg of CO₂e and saved the university £12,514.

Making it easy for students and staff to reuse or recycle is another key factor. Swansea has an app that incentivises daily recycling and waste avoidance, while the climate and sustainability delivery team at King's is about to launch a two-year behavioural change campaign focusing on waste.

“The aim is to double down on efforts to reduce single-use plastics and change staff and student behaviours on campus through an extensive series of communications [and] educational and informative events,” says Frans Berkhout, assistant principal of King's Climate & Sustainability.

Several of the universities combine food waste reduction with local community outreach. Bournemouth, for example, is the UK research partner for FoodMAPP, a project that helps consumers find and buy local food supplies, reducing waste and supporting sustainable purchasing.

According to Julian Skyrme, director of social responsibility at the University of Manchester,

“All UK universities emphasise the importance of applying principles of the circular economy in their policies”

“Research which breaks new ground and offers solutions to the challenges faced by the modern world can often start as a hyperlocal project”

“the UK does comparatively well due to the quality of its research on consumption and production, and perhaps due to national environmental legislation that may employ relatively more carrots and sticks to prompt action in this area”.

Decent work and economic growth: South Korea tops the table

The top four spots in the SDG 8 (decent work and economic growth) table all go to institutions in South Korea. The country has three more in the top 100.

This table reveals a university’s success as an engine of economic growth and its role as a responsible employer. It tracks institutions’ economic research, their employment practices, their expenditure per employee, the share of students taking work placements and the share of employees on secure contracts.

Pusan National University, which ranks third in the table, has a high proportion of staff on secure contracts. Eunjin Kim, from the university’s division of planning and evaluation, attributes this to national policy, as faculty and staff are national public officials.

When it comes to spending per staff, Pusan is “implementing a stronger investment policy to improve the academic environment for students and the education, research and welfare environment for faculty and staff”, she says. “As a result, the expenditure per employee has been increasing every year.”

The university has also placed a big emphasis on student work experience through its Field Training Support Centre, and it is “making efforts to enhance the efficiency and competitiveness of field training by collecting opinions from trainee students and domestic and international companies”.

“As a result, the number of participating students is gradually increasing, leading to an increase in employment rates,” says Kim.

PICTURES: GETTY IMAGES

Clean water and sanitation: Australia leads again

When it comes to contributing to SDG 6 (clean water and sanitation), Australian universities are among the very best globally, with seven in the top 10. UNSW Sydney, the University of Newcastle, the University of Technology Sydney (UTS), Macquarie University, Griffith University, Western Sydney University and RMIT University all feature in the elite group.

This table measures universities’ research on water, their water consumption, their water usage and care, their water reuse and their work relating to water in the community.

As with the UK universities’ approach to waste management, a common theme is meticulous data collection and analysis, especially when it comes to water reuse and recycling. Another is strong partnerships with other types of organisations, as might be expected when dealing with a resource such as water. UTS, for example, partners with Melbourne water businesses to help cut demand and reduce the pressure on natural water supplies, while Macquarie has been collaborating with Sydney Water for more than two decades to help ensure the cleanliness of the city’s drinking water.

Universities cite numerous impactful initiatives on their own campuses, such as Macquarie’s Mars Creek project to restore a creek that runs through the campus by introducing thousands of native plants.

A common element is a community-led approach and the involvement of multidisciplinary teams. Several institutions also mention working with local Indigenous communities. One example is Western Sydney’s involvement as a founding member in the Hawkes-

bury-Nepean Waterkeeper Alliance, which works with Dharug people. At Newcastle, “the impacts [of climate variability] on Indigenous and developing communities in the region are a particular focus”, says Jennifer Milam, its pro vice-chancellor (academic excellence).

These institutions also contribute to water management in neighbouring countries and further afield, often leveraging their local successes. For example, Western Sydney is the Australian lead of the Australia India Water Centre, a collaboration of Australian and Indian universities, research institutions and water businesses in water research, education, training and capacity-building.

“Western recognises that research which breaks new ground and offers solutions to the challenges faced by the modern world can often start as a hyperlocal project,” says Deborah Sweeney, Western Sydney’s deputy vice-chancellor and vice-president (research, enterprise and international).

Australian universities credit a strong policy framework and funding initiatives at the national, regional and local government levels – such as the Australian Water Partnership, launched by the Department of Foreign Affairs and Trade in 2015 to share Australia’s water expertise – for their success in this area. This has come about, they say, because of the changing climate, which has amplified the extremes of drought and floods in Australia and its Pacific neighbours.

Nicole Marchhart, head of sustainability at Macquarie, says: “In Australia, a country well versed in drought and its devastating impact, water conservation is a glaring issue. The commitment of Australian universities in this area is a case of necessity.” ●

AFRICA RISING: PARTICIPATION ACROSS CONTINENT DOUBLES

Increasing numbers of African universities are focusing on the United Nations' Sustainable Development Goals (SDGs), with those featuring in *Times Higher Education's* Impact Rankings more than doubling in the space of a year.

The continent now has 230 universities ranked across the 18 Impact tables, which assess universities against the SDGs, up from 106 in 2023.

The growth was led by two countries: Algeria, which now has 77 institutions, up from 14 last year; and Nigeria, which has 27, up from 11.

The performance of universities in the continent has also improved.

Universities in South Africa have historically achieved the highest scores, but for the second consecutive year an African institution outside the economic and research powerhouse tops an SDG table.

Afe Babalola University in Nigeria, a private institution, climbs up the top 10 to rank first for SDG 7 (affordable and clean energy) this year. While the institution receives lower scores than its peers for bibliometrics relating to research in this area, it achieves top marks for the six indicators relating to university measures towards affordable and clean energy, the indicator on the energy use of its buildings, and the five indicators relating to community outreach work on energy.

Five other African universities feature in the top 20 for SDG 7, all of them in Egypt.

The vast majority of the 230 African universities participating in the rankings submitted data on SDG 17 (partnerships for the goals) – the only mandatory goal for inclusion in the overall ranking.

After that, SDGs 4 (quality

education), 3 (good health and well-being) and 5 (gender equality) were the most popular for the continent, in line with the global trend.

The majority of African universities (59 per cent) also submitted data on SDG 1 (no poverty), above the global average of 49 per cent. South Africa is the top-performing country in the world for this SDG, on average, based on nations with at least five ranked universities.

Three African institutions make the top 15 for SDG 1 this year: the University of Johannesburg is third (down from first last year), while the University of Pretoria debuts at eighth

and Afe Babalola University is joint 15th.

All three universities receive top scores for indicators relating to their own anti-poverty programmes, such as support for students from the poorest families.

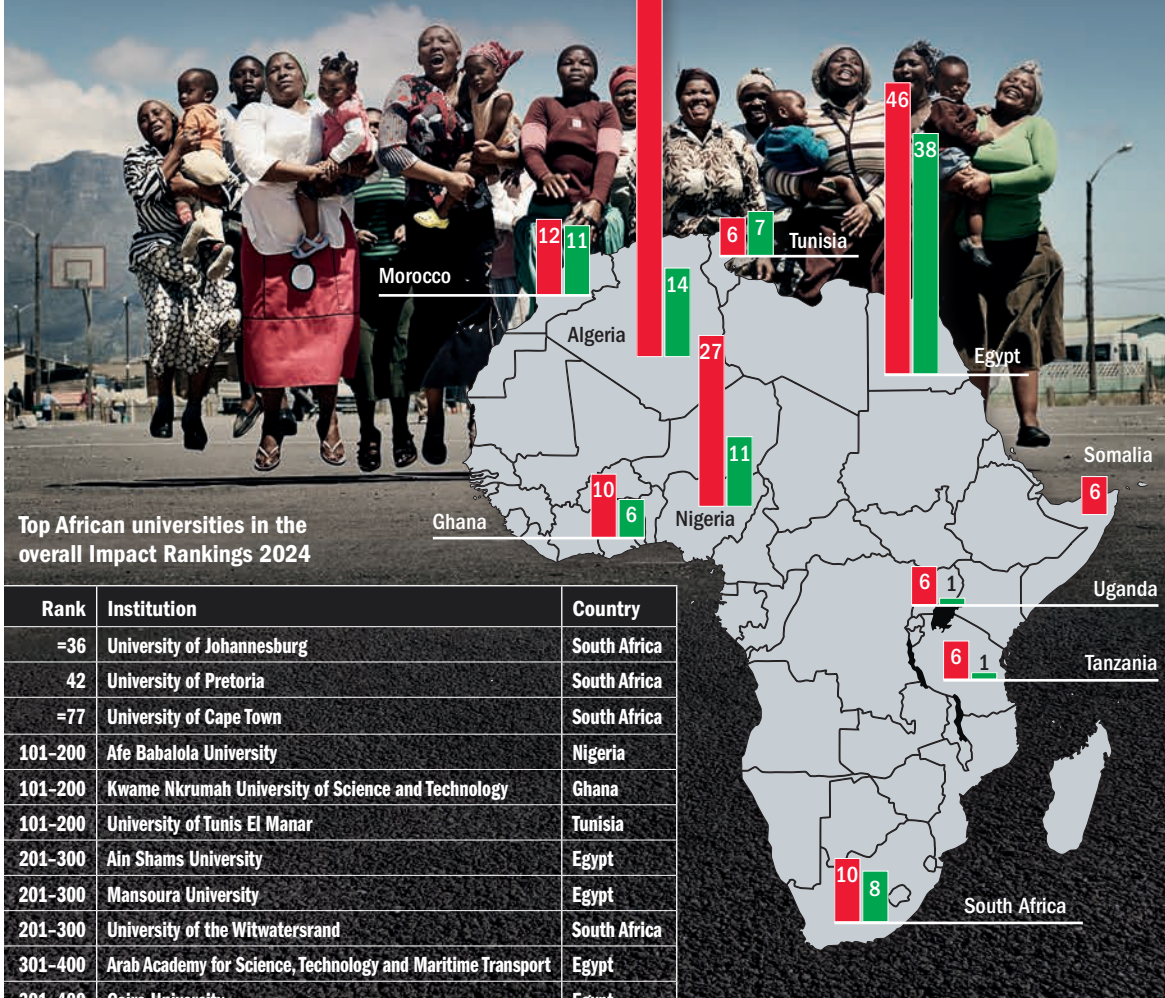

The least popular SDG for the African continent is 14 (life below water), with less than a quarter of participating institutions submitting data in this area, followed by SDGs 12 (responsible consumption and production) and 15 (life on land).

The top African university in the overall Impact Rankings, which scores institutions based on their performance in SDG 17 and their best three results on the remaining 16 SDGs, is the University of Johannesburg, at joint 36th. Two other South African institutions – the universities of Pretoria and Cape Town – follow in the top 100.

Ellie Bothwell

Top African countries by participation in Impact Rankings 2024

Number of universities in
■ Impact 2024
■ Impact 2023

Top African universities in the overall Impact Rankings 2024

301-400	Cairo University	Egypt

The novel innovation of “eco-tiles” aiming to enhance biodiversity and ecosystem services, was awarded the Gold Award at the Hong Kong Green Innovations Award.

INNOVATING INTO THE FUTURE

City University of Hong Kong is using its reputation as the world’s most international higher education institution to help tackle major environmental concerns.

At City University of Hong Kong (CityUHK), sustainability is framed as the long-term maintenance of the entire biosphere, echoing our commitment to the One Health paradigm: human, animal, and environmental health are inexorably linked.

In our 30th anniversary year, we believe One Health is a crucial concept around which we can build high levels of sustainability and commit to three essential goals for identifying keenly needed solutions: operate with minimal waste and energy consumption; educate our campus communities about the environmental, social and economic challenges of protecting the planet; and forge robust relations with stakeholders in government, NGOs, the private sector and the public.

“We are committed to integrating sustainability into university education through reflective programmes of study and groundbreaking research, emphasising at all times conservation, recycling, prudence and reflection,” says Freddy Boey, CityUHK president.

Going Global

Moreover, as the World’s Most International University and one of the top 5 Young Universities, according to Times Higher Education, we wish to lead in meeting the UN’s 17 Sustainable Development Goals.

“We are trying to use our reputation as a higher education institution that others wish to work with to meet the needs of future generations,” Boey says. “We must safeguard our planet. We must see ourselves as gatekeepers, not simply as consumers.”

Our impact is truly global. We have students on campus representing more than 80 countries or regions, and we have brought over 400 exchange partners on board, with approximately 65% of undergraduates participating in these overseas programmes. This curriculum is designed to encourage our students to respond professionally to sustainability challenges.

Within this dynamic and flexible curriculum, we offer majors and minors at undergraduate and postgraduate levels on sustainability issues and continue developing new programmes with sustainability elements, such as biomedical/food management sciences and sustainable policy, among others.

Notching up Collaborative Firsts

Several institution-level research centres and laboratories promote constructive collaboration in environmental protection and sustainability. We were the first university in Hong Kong to set up a school for energy and environment and a college for veterinary medicine, both focused on the One Health concept.

In addition, our Hong Kong Institute for Clean Energy (HKICE) pursues innovative clean energy solutions with input from industry and government leaders, stakeholders, researchers, and academic experts.

“Many universities stress being sustainable, which is commendable,” adds Boey. “But what makes us different is that we have created a nexus for industry and government leaders, stakeholders, researchers, and academic experts to collaborate on transforming the future of clean energy.”

Sustainable Research

CityUHK’s research and innovation endeavours focus on environmental conservation, climate change mitigation, renewable energy, sustainable materials, and resource management, among others.

CityUHK's revolutionary cooling ceramic combats global warming through its application in building construction.

- Recent research published in *Science* revealed a massive breakthrough in developing a highly durable ceramic that can reduce the thermal load generated by buildings and provide stable cooling performance even in diverse weather conditions in all climates.
- Published in *Nature*, research led by CityUHK announced a groundbreaking step forward in developing a highly efficient electrocatalyst that can enhance hydrogen generation through electrocatalytic water splitting. Hydrogen generated by electrocatalytic water splitting is one of the most promising clean energies for replacing fossil fuels.
- A new invention called the Powerful Nanogenerator with Ultrahigh Power Density, led by our Department of Mechanical Engineering and School of Energy and Environment at CityUHK, has set a record for the high-power output of similar nanogenerators as it can generate over 1,000 volts of electricity. This small and easy-to-install wind turbine for highways and tunnels can exploit the wind flow caused by moving vehicles while the fan blades of the wind turbine can be adjusted to match any changes in wind behaviour.

Engaging, Empowering

CityUHK students are given every opportunity to engage in sustainable practices and make a positive global impact. Through organic agriculture, we

state that permaculture develops sustainable forms of human communities by following models of naturally occurring ecosystems. Recent foci of attention include:

- The CityUHK community promotes how to grow productively in the Hong Kong context
- Close staff-student partnerships and over 400 students with direct growing experience
- First organically certified university rooftop in Hong Kong
- A vision of educating and practising food sustainability
- Widening network with Hong Kong society: the organic movement, NGOs, secondary students and SMEs

Our flagship programme for innovation and entrepreneurship, HK Tech 300, encourages students, alumni, research staff and other eligible members to launch start-ups at the onset of their entrepreneurship journey.

Several HK Tech 300 projects infused with green initiatives seek to solve environmental problems and provide better pathways for more sustainable living. Among the many examples are:

- e-Farm Biotech Limited: Creating a circular economy by transforming discarded resources into animal feed and harnessing the power of the larvae of black soldier flies to convert waste into usable organic materials.

- Super Bamboo Limited: Designing the world's most advanced augmented bamboo-based material for making carbon-neutral and sustainable products.
- NerOcean Limited: Devising a new generation of marine sensors for a cost-effective solution to sustainable environmental monitoring and management.

Academy of Innovation

Four pioneering programmes at our newly launched Academy of Innovation are targeted specifically at tackling environmental challenges. They are:

- PhD by Innovation
- MSc in Venture Creation
- Graduate Research and Innovation Trek Programme (GRIT)
- Overseas Start-up Technology Entrepreneur Programme (STEP)

The focus of these four programmes will be on developing a leading international ecosystem that will help to nurture young entrepreneurs, incubate deep-tech start-ups and promote university-industry collaboration.

Making Real Progress

The priority of all our efforts, from classrooms and laboratories to research collaboration, outreach, and policy initiatives, is fostering youthful passion at the local and global scales, learning from experienced sustainability experts, and harnessing digital breakthroughs.

"Universities must play a major role in sustainability, and we are especially eager to collaborate with international partners who are as like-minded and resolute as we are," says Boey.

Handling with care

New thematic analysis reveals the countries and institutions that are walking the talk on sustainability, reports Rosa Ellis

When it comes to the university sector’s contribution to averting climate disaster and ensuring a more sustainable world, groundbreaking research and educating future leaders is what comes to mind for many. But those in the sector know that universities contribute to achieving the SDGs in myriad other ways, from outreach work influencing local and global communities to leading by example and running their own organisations as sustainably as possible.

The *Times Higher Education* Impact Rankings track these different ways of contributing to the SDGs under four themes: research, teaching, outreach and stewardship. Here we’ve taken a deep dive into the data to see where universities are excelling in the perhaps lower-profile work of outreach and stewardship.

For every SDG, we have mapped each indicator to one or more themes, then given each university a score out of 100 for each theme. We have extrapolated country and continent averages from those scores (for more detail on the methodology, see the box below, opposite).

By looking at the types of activities in which universities are partaking, we can see where strengths lie and where there is room for improvement. At the continent level, if a region is strong in one area, it tends to be strong in all.

But at the country level some differences emerge.

Stewardship

How universities steer their own ships in terms of sustainability and equality is important, both in contributing to sustainable development for its own sake and for setting an example to other sectors and organisations.

Being good at stewardship activities means scoring well for indicators such as tracking food waste and having sustainable food choices on campus (SDG 2), the proportion of senior female academics (SDG 5), having water reuse policies and measurements (SDG 6), ensuring energy efficiency with renovations of buildings (SDG 7), and guaranteeing a living wage (SDG 8).

Looking at country-level performance, based on nations with five or more ranked universities, New Zealand is top for stewardship, followed by Australia, Hong Kong, Ireland and Canada.

However, at the university level, some institutions buck their country’s trend. The top-scoring institution for stewardship activities is Afe Babalola University in Nigeria, followed by RMIT in Australia and Walailak University in Thailand. Batterjee Medical College in Saudi Arabia also receives a high score, as do Swansea and Northumbria universities and the University of Exeter in the UK.

“It’s important to ‘walk the talk’ and give young people a clear sense of what sustainability looks like in practice, in addition to what they learn through their studies,” says Ellie Kivinen, associate director of the Sustainability Hub at the University of Auckland, which ranks 13th globally for stewardship. Some of the institution’s most impressive stewardship initiatives include the refurbishment of a 50-year-old building in an “adaptive reuse” project, which cut carbon emissions in half by reusing and strengthening the existing structure rather than starting from scratch.

Auckland is also working on improving pay equality within the university. It has identified pay gaps for women, Māori and Pacific peoples, and those of diverse ethnicities, and believes that taking ownership of these numbers is crucial. Guillermo Merelo, associate director of diversity, equity and inclusion at the institution, says:

“We are working to create a sustainable people culture, where everyone feels their contributions are equally valued”

TOP UNIVERSITIES FOR STEWARDSHIP

Institution	Country/region	Stewardship score
Afe Babalola University	Nigeria	98.2
RMIT University	Australia	96.1
Walailak University	Thailand	95.6
University of Exeter	United Kingdom	95.1
University of Tasmania	Australia	95.0
University of Technology Sydney	Australia	95.0
Batterjee Medical College	Saudi Arabia	94.8
Western Sydney University	Australia	94.4
Swansea University	United Kingdom	94.2
Northumbria University	United Kingdom	94.1

TOP COUNTRIES/REGIONS FOR STEWARDSHIP

Country/region	Number of ranked universities	Average stewardship score
New Zealand	8	85.3
Australia	21	84.4
Hong Kong	5	81.9
Ireland	8	81.4
Canada	24	80.5
United Kingdom	68	79.7
United States	46	69.1
South Korea	24	67.9
Belgium	5	65.2
Netherlands	6	64.5

Note: Table only includes nations with five or more ranked universities.

“This is only the beginning of our journey in creating a sustainable people culture, where everyone feels their contributions are equally valued in our complex organisational ecosystem.”

George Marston, pro vice-chancellor (strategic projects) at Northumbria University, says that universities can have a significant impact on sustainability through their operational activities, “but it is the influence they bring to bear more widely – on students, cities and regions through their role as anchor institutions, and the national and international research communities – that has the biggest impact on driving sustainability. Leading by example is essential if we are to have credibility within these communities.”

Outreach

Universities that are good at outreach score highly for indicators such as contributing to policies addressing poverty (SDG 1), collaborating with health institutions (SDG 3), providing programmes for the local community to learn about energy efficiency (SDG 7), participating in cooperative planning for climate change disasters (SDG 13) and providing expert advice to government (SDG 16).

Universities in Hong Kong are

especially strong at this type of work, with an average score of 81.4 out of 100. Canada, New Zealand, Australia and Ireland make up the rest of the top five.

The highest-ranking institution when it comes to outreach is again Afe Babalola University in Nigeria, followed by the University of Minnesota in the US. The latter institution is the sole university partner for the SDG Data Alliance, which brings GIS (geographic infor-

mation system) technology to developing countries to speed up SDG achievements.

The UK’s Ulster University, which ranks joint fifth in the world for outreach activities, says it is particularly strong on sports initiatives, running programmes to support activity among disadvantaged young men, “at risk” young people and those with mild to moderate intellectual or physical disabilities. The university also has a pro-

METHODOLOGY

The Impact Rankings track the different ways of contributing to the SDGs under four themes: research, teaching, outreach and stewardship. For this analysis, we have mapped every indicator to one or more relevant themes.

For example, under SDG 3 (good health and well-being), we track: the number of publications linked to health, which sits under the research theme; the proportion of graduates who receive a health degree, which sits under the teaching

theme; outreach programmes in the local community to improve health and well-being, which sits under the outreach theme; and mental health support for students and staff, which sits under the stewardship and teaching themes.

Universities are given a percentile score for each theme (based on their performance on all of the theme’s indicators). This score indicates how the university performs on each theme relative to other

universities.

For example, if a university has a percentile score of 60 for the teaching theme, it performs better than 60 per cent of universities across the world in terms of teaching activity related to the SDGs.

We have only analysed universities that have participated in at least four SDGs, including SDG 17. To indicate a region’s relative strength, we have used the average percentile scores by country and continent.

“Leading by example on sustainability is essential if we are to have credibility within these communities”

“Community-university collaborations ensure we can make progress towards achieving the SDGs at the local, national and international levels”

ANTHONY KWAN/GETTY IMAGES

gramme in partnership with Belfast City Council to deliver free training to the community on green skills, and a short course on legal technology with law firm Allen & Overy.

“Our place at the heart of Northern Ireland’s knowledge and skills ecosystem is highly developed, as is the part we play in economic growth and regional enhancement of cultural life,” says Ian Montgomery, Ulster’s dean of sustainability and corporate social responsibility.

Over in Asia, The Chinese University of Hong Kong, which ranks joint eighth for outreach, worked with the Hong Kong Jockey Club Charities Trust to launch the Hong Kong chapter of the United

Nations’ Sustainable Development Solutions Network (SDSN Hong Kong), which now has 55 chapters worldwide with more than 1,900 institutional members. Their partnership has also created the Jockey Club Museum of Climate Change, which is located at CUHK and is the world’s first museum focusing on climate change.

“CUHK is known for its thought leadership in the creation and application of practical solutions for sustainable development contributing to the well-being of communities, local and beyond,” a spokesperson said.

At Arizona State University (Tempe), ranked third for outreach, a key local programme is “Project

Cities”, in which sustainability faculty and students pair with a city to co-create strategies for better environmental, economic and social balance. Students from multiple disciplines research challenging issues chosen by the city and propose sustainability solutions. On a national level, the university has partnered with the Mayo Clinic to improve the science of healthcare delivery and practice while advancing patient care.

“Community-university collaborations ensure we can make progress towards achieving the SDGs at the local, national and international levels,” says Christina Ngo, director of social embeddedness at ASU. ●

TOP UNIVERSITIES FOR OUTREACH

Institution	Country/region	Stewardship score
Afe Babalola University	Nigeria	98.0
University of Minnesota	United States	97.0
Arizona State University (Tempe)	United States	96.2
Walailak University	Thailand	95.8
KIIT University	India	95.0
Ulster University	United Kingdom	95.0
University of Exeter	United Kingdom	94.7
University of Manchester	United Kingdom	94.6
Chinese University of Hong Kong	Hong Kong	94.6
University of Auckland	New Zealand	94.5

TOP COUNTRIES/REGIONS FOR OUTREACH

Country/region	Number of ranked universities	Average outreach score
Hong Kong	5	81.4
Canada	24	80.4

CLEAN WATER FOR STUDENTS IN INDIA

Faculty and students from Virginia Tech are working to apply a common household water purification method – using silver ion tablets – at a community scale. Working in the field and applying data models to predict tablet effectiveness, the team used ancient technology – string – as well as sensors and lab work in this groundbreaking study.

Virginia Polytechnic Institute and State University

We are The University of Warwick.

Born in the 60s, with a mindset of boldness, imagination and collaboration, we've always been a forward-facing organisation.

Our founding ethos makes us who we are today...
a diverse, innovative and globally-connected university
with the highest academic and research standards.

Currently ranked 9th in the UK*, 92% of our research has
been assessed as 'world leading' or 'internationally excellent'**. .

Together, we can lead the world through a future of change.

As the world faces a future of faster, more profound change,
with all the possibilities, pressures and uncertainty that brings,
the role of higher education will be more vital than ever.

We do what we do at Warwick because, even in the face of
all this uncertainty, we believe we all have it in us to find the
answers and make a better world.

**Together, we can ignite progress in the real world.
Be a part of the journey.**

Hong Kong: an international hub for world-class higher education

Hong Kong's higher education sector is more attractive than ever to international students seeking world-class education and a life-changing learning experience

As a vibrant, open and diverse cosmopolitan city, Hong Kong is thriving as an ideal study destination for students from around the world. It is the place where East meets West, not only culturally but also in terms of employment opportunities, internships and networking. What makes the city unique is the presence of a strong and world-class publicly funded higher education sector. Among the eight universities receiving public funding through the University Grants Committee (UGC), five were ranked in the top 100 in the Times Higher Education World University Rankings 2024.

Thanks to Hong Kong's international outlook and its higher education sector's excellent reputation, the city embraces students from around the world. To further raise Hong Kong's profile in the international higher education landscape, the Heads of Universities Committee's Standing Committee on Internationalisation (HUCOMSCI), jointly formed by the eight UGC-funded universities, is spearheading the Study in Hong Kong initiative.

Derek Collins, convener of the HUCOMSCI, guarantees students an elite education if they study in Hong Kong. The eight UGC-funded universities have their unique strengths, differentiated roles and distinctive legacies, thereby offering a diverse and comprehensive learning experience for international students. "Different faculties in Hong Kong universities – such as business, engineering, arts and law – attract leading scholars and experts from all over the world, including roughly 70 per cent non-local academic staff from outside of Hong Kong. World-leading professors lead to the kind of educational experience that is essential for young people today," Collins says. "What better way to deliver that knowledge than through the experiences of professors from different parts of the world?"

"Hong Kong isn't just open for global higher education, it was made for it"

Derek Collins, convener of the Heads of Universities Committee's Standing Committee on Internationalisation

Collins is also associate vice-president of cultural and external affairs at the University of Hong Kong (HKU). He says Hong Kong's universities have always had an international outlook and valued international students. As the sector rebounds from the impact of the Covid-19 pandemic, there has been a concerted effort to showcase this global focus.

Countries involved in China's Belt and Road Initiative (BRI) make natural partners in HUCOMSCI's efforts in internationalisation. Students from BRI countries who wish to study in Hong Kong can apply for the Government's Belt and Road Scholarship, which covers tuition fees, accommodation and living expenses. "There are a lot of young people who need to be exposed to different parts of the world and need to be exposed to Asia," Collins says. "We are giving students an international education with a strong emphasis on Asian perspectives and an Asian outlook." The upcoming 50 per cent increase in the quota for the Belt and Road Scholarship speaks to the city's ambition to expand its connection with the BRI countries.

Tehreem Fatima is a third-year biomedical science student from Pakistan, studying at HKU on a Belt and Road Scholarship. She says students will find Hong Kong a safe city with affordable student accommodation and opportunities to get real-world work experience. "I have done several internships, including two summer internships and an overseas internship," she says. "Doing an overseas internship gave me more clarity on my career. It helped me to see the practical side of where I will be after I graduate and when I step into the work environment."

Osandi Wijayasooriya from Sri Lanka is a third-year chemical technology student at the Hong Kong Polytechnic University and is also studying on a Belt and Road Scholarship. She said it was the university's

SPONSORED CONTENT

strong performance in rankings tables that ultimately swayed her decision to study there. “The standards are really high,” she says. “If you look at the rankings of the universities in Hong Kong, they are at least in the top 100 in many global ranking systems. That helped me choose Hong Kong for my higher education.” The university’s support made it easy to settle in on campus, she added.

In October 2023, the Hong Kong government unveiled a bold initiative to double the number of non-local students at the eight UGC-funded universities. Some 13,500 hostel units are being built to meet the rising demand for student housing. Postgraduate students are allowed to take on part-time employment to help finance their studies and the application process has been streamlined, with admissions offices now managing scholarships for international students. “The idea is to make it easier than ever for young people to find opportunities, funding and, ultimately, stay and work,” Collins says. “It used to be that if you were a postgraduate student from abroad you couldn’t work. The government has relaxed that.”

International students in Hong Kong also benefit from exposure to one of the most influential economies and richest cultures in the world. “Undergraduate students from anywhere in the world need to understand something about China,” Collins says. “They need to appreciate first-hand what’s developed here and what it is like to be here.” Three of the UGC-funded universities have opened campuses in Mainland China, all of which are situated within the one-hour living circle of the Guangdong-Hong Kong-Macao Greater Bay Area. The rest of the UGC-funded universities also offer numerous opportunities for internships, study trips and service learning on the mainland.

Collins says Hong Kong’s international students are

Main image: Derek Collins, convener, HUCOMSCI
Clockwise from above left: Tehreem Fatima, third-year biomedical science student, the University of Hong Kong; Osandi Wijayasooriya, third-year chemical technology student, the Hong Kong Polytechnic University; Pran Kittivorapat, fourth-year artificial intelligence student, the Chinese University of Hong Kong; Afiya Ballard Debois, third-year student, Newcastle University

offered a “front row” perspective on life and business in Asia, allowing students to build networks that will help grow their careers. “It supercharges your experience to have an internship in Hong Kong, to have work experience here and to have built a network,” he says. “Having those connections in Hong Kong will be crucial to their career advancement.”

International students can stay in Hong Kong for a full degree programme, an academic year or just a semester as the UGC and HUCOMSCI’s internationalisation strategy

accommodates exchange students. Over 2,600 student exchange agreements have been signed between UGC-funded universities and institutions across the globe. Afiya Ballard Debois, a third-year undergraduate student from Newcastle University, is an exchange student enrolled at HKU. For Ballard Debois, the opportunity to live and study in Hong Kong was too good to turn down. “I had never been to Asia before so to come to Hong Kong, to travel to other parts of Asia and to be introduced to Asia in general, has been a great experience,” she says.

Cultural exchange is equally valuable for students who come from other parts of Asia. Pran Kittivorapat, a fourth-year student from Thailand majoring in artificial intelligence at the Chinese University of Hong Kong, says support from the association for Thai students is one of the highlights of studying in Hong Kong. “You can make friends with people from all over the world,” he says. “It helps me to grow an open mindset.” Collins hopes many other students will follow the path taken by Kittivorapat and other international students in the city. “Hong Kong isn’t just open for global higher education, it was made for it,” says Collins. “You are in a city that has an international element in its DNA.”

Shaping sustainability-conscious graduates

Universitas Padjadjaran promotes sustainable development by integrating tenets of sustainability into its courses and campus operations

Universitas Padjadjaran in Indonesia is actively supporting global efforts to mitigate climate collapse and promote sustainable development. Founded in 1957, the university's campus facilities and research centres play a crucial role in supporting its impact in the field of sustainability. The university's commitment to the United Nations' Sustainable Development Goals (SDGs) is included in its core academic values, says Rina Indiatuti, the university's rector.

"Universitas Padjadjaran integrates sustainability principles and the SDGs into its academic curriculum across various disciplines," says Indiatuti. The university offers a wide range of undergraduate and postgraduate programmes in subjects such as sustainable development, environmental studies, renewable energy and social justice.

The university has implemented smart building technology to create an environmentally friendly campus. In 2016, the university established the Sustainable Development Goals Center, which was the first of its kind in Indonesia, to design courses related to sustainability and carry out public awareness initiatives and community service. The Center for Environment and Sustainability Science and the Center for Economics and Development Studies also conduct interdisciplinary research related to sustainable development.

The university provides specialised research facilities and laboratories for research projects on various aspects of sustainability, such as environmental science, climate change mitigation and

sustainable agriculture. The university also offers collaborative spaces, such as meeting rooms, seminar halls and coworking spaces, where researchers, students and faculty members can come together to exchange ideas, share knowledge and work on interdisciplinary projects related to sustainability. To strengthen interdisciplinary and transdisciplinary collaboration, the university delivers postgraduate and doctoral programmes using coworking spaces, collaborative hubs and hybrid rooms.

The university offers many experiential opportunities related to the SDGs, such as internships, service-learning projects and volunteering opportunities. "These projects allow students to address community needs, develop social responsibility skills and apply their academic knowledge," Indiatuti says. "By offering these diverse opportunities for students to engage in real-world problem-solving and skills development, the university prepares its graduates to become well-rounded professionals equipped to address complex challenges and make positive contributions to society."

Universitas Padjadjaran collaborates with other universities, institutions and government agencies to enhance its impact and global reach through joint initiatives and partnerships.

Such collaborations enable the university to promote academic exchange, sustainable development research, technology transfer and student and faculty mobility, says Indiatuti.

The university is committed to strengthening its sustainability efforts and contributions. To achieve this, it plans to implement green campus initiatives and sustainable infrastructure, expand community engagement programmes and invite more opportunities for collaborative research. Additionally, the university aims to establish research grants, scholarships and fellowships for students and faculty members conducting research in areas such as climate change and sustainable development. "Investing in sustainability efforts at Universitas Padjadjaran not only benefits the institution but also empowers students to become agents of positive change in their communities and beyond," Indiatuti concludes.

Towards Global Eminence

Kyung Hee University,
established in 1949, one of the best
universities in Korea, has spearheaded efforts
for the future development of academics and
common values for humanity.

Times Higher Education
Impact Rankings 2024

23rd

Academe and Peace

With the belief that "a university must contribute to the development of academics and society," Kyung Hee University has pursued world peace through various programs and social campaigns for 75 years.

Founded in 1949, Kyung Hee has three campuses: **Seoul, Global and Gwangneung**. Kyung Hee has two comprehensive medical centers with treatment systems bringing together Oriental and Western medicines. Kyung Hee is offering 'a vision of a future university worthy of its name' and is becoming a world-class higher education institution in the 21st century.

Kyung Hee is realizing 'Global Eminence' within its tradition of 'Academe and Peace'. Kyung Hee's calling and duty is to contribute to creating 'a better human and a better world' through academic practice based on education, research and service.

GLOBAL SUSTAINABLE DEVELOPMENT CONGRESS

#GSDcongress

10–13 June 2024 | Bangkok, Thailand

Showcase your institution's impact to sustainability leaders from across the globe

The agenda features six core tracks

Digital revolution for sustainable development

Education, gender and inequality

Energy decarbonisation and sustainable industry

Health, well-being and demography

Sustainable cities and communities

Sustainable food, land, water and oceans

Alongside a series of featured tracks

Live reveal of the THE Impact Rankings

International Green Skills Summit

Exhibition hall

Secure your 50% discount with the code **IMPACT-50**

Explore the agenda and buy tickets at timeshighered-events.co/THEMag

UNIVERSITY OF
BEIRA INTERIOR

Covilhã | PORTUGAL

INNOVATION

is our COMMON LANGUAGE

With an average number of citations per scientific article above 4 in the last two years, our academic excellence is proven. Our teachers and students are at the forefront of research and Medicine, Engineering, Computer Science, Social Sciences and Business, Management and Accounting are top fields of research at UBI.

Our researchers work on projects aimed at the major challenges of promoting health and quality of life, the energy transition and fighting climate changes, but also on the application of endogenous products in the aesthetics and food industries.

We are committed to driving the advancement of knowledge and offering an education that prepares students for the challenges of the future.

www.ubi.pt

Global hotspots

Excellence in the individual SDGs is not constrained by geography, with a variety of institutions and regions carving out areas of expertise, as the graphic shows

Note: Map location corresponds to site of top university. Analysis of best countries, on average, considered only nations with at least five ranked universities.

4 QUALITY EDUCATION

1,681 universities from **122** countries/regions
Top university: Aalborg University, Denmark
Best country/region, on average: Germany

9 INDUSTRY, INNOVATION AND INFRASTRUCTURE

1,018 universities from **101** countries/regions
Top universities (tied):

- Delft University of Technology, Netherlands
- RWTH Aachen University, Germany
- Technical University of Munich, Germany
- TU Dresden, Germany
- University of Edinburgh, UK
- University of Erlangen-Nuremberg, Germany
- University of Stuttgart, Germany
- Yonsei University (Seoul campus), South Korea

Best country/region, on average: Germany

8 DECENT WORK AND ECONOMIC GROWTH

1,149 universities from **107** countries/regions
Top university: Kyungpook National University, South Korea
Best country/region, on average: Australia

3 GOOD HEALTH AND WELL-BEING

1,498 universities from **115** countries/regions
Top university: JSS Academy of Higher Education and Research, India
Best country/region, on average: Australia

16 PEACE, JUSTICE AND STRONG INSTITUTIONS

1,086 universities from **113** countries/regions
Top university: Universiti Sains Malaysia, Malaysia
Best country/region, on average: New Zealand

1 NO POVERTY

1,093 universities from **107** countries/regions
Top university: Universitas Airlangga, Indonesia
Best country/region, on average: South Africa

17 PARTNERSHIPS FOR THE GOALS

2,031 universities from **121** countries/regions
Top university: University of Technology Sydney, Australia
Best country/region, on average: New Zealand

10 REDUCED INEQUALITIES

1,108 universities from **111** countries/regions
Top university: RMIT University, Australia
Best country/region, on average: Australia

13 CLIMATE ACTION

924 universities from **103** countries/regions
Top university: University of Tasmania, Australia
Best country/region, on average: Australia

5 GENDER EQUALITY

1,361 universities from **114** countries/regions
Top university: Western Sydney University, Australia
Best country/region, on average: Australia

SAM CHIVERS (EDITED)

THE UNIVERSITY
OF THE
WEST INDIES

A global school for the SDGs rooted in the Caribbean

The **International School for Development Justice (ISDJ)** at The University of the West Indies (The UWI) is leading the way in a new paradigm for development.

**Join us in shaping
a fairer and more
just world.**

Discover more at www.uwi.edu/isdj

ISDJ's online courses offer flexible learning options for one-year Master's level programmes, micro-credentials, workforce development, executive education and more.

Our approach emphasizes **equity, ethics, and transparency**, and we deliver world-class scholarship exclusively on the Sustainable Development Goals (SDGs).

Our team of experts focuses on areas in which the Caribbean is uniquely positioned to have an advantage.

A liberal dose of AI for humanities

The president of Lingnan University tells Ellie Bothwell about requiring students to use ChatGPT and using data to manage grumbles from staff

Many say we are now in a fourth industrial revolution, with technological advances fundamentally changing how we live and work. Joe Qin prefers to see the shift as an “intellectual revolution”.

“It is revolutionising our cognitive ability – how we read, write, listen and translate or generate content,” says the president of Lingnan University Hong Kong. It is also transforming education and research at the liberal arts institution, which ranks 17th for quality education (SDG 4) in the Impact Rankings 2024.

In the past 10 to 15 years, Lingnan has focused on the arts. “The recent emergence of data science and other interdisciplinary sciences gives us the opportunity to enhance our science side,” says Qin (pictured inset), who plans to steer the university into the digital era.

“Sometimes I call it a liberal arts revolution,” he adds.

Last month, the university opened a new school of data science, five years after launching an undergraduate programme on the subject, and all undergraduate students will be required to take a course on generative AI. The institution is also in the process of proposing new undergraduate programmes on interdisciplinary fields such as social data science or digital arts.

A year ago, the instinct for many universities was to ban or severely restrict the use of ChatGPT and other AI tools on campuses because of the risk that students would use it to cheat. While institutions are

now generally more accepting of the technology, most still have strict limits on its use.

Lingnan, however, has done the opposite: AI tools are “freely available to our students and staff”, according to Qin. In fact, students will sometimes be required to use AI on essays or to complete exams or projects, to test whether they are “AI literate”. The technological advancements over the past year have only “reinforced” the university’s position in embracing the tools, he says.

“If you don’t let [students] use it, how can you make sure they will use it properly? The best way is to let them use it while they are studying and on campus and [while they] have the guidance from professors,” he says.

“We cannot simply ignore it. We want our students to have the skills of the future, not the past.”

Qin stresses that it is “up to the instructors to form the assignments”, but one example he suggests is asking students to share the sequence of prompts they input into ChatGPT and their thought processes behind them, as well as any generated content.

“You don’t always get the answer [you want] the first time you use it. You have to change the way you interact with ChatGPT,” he explains. “That process is actually the way we would use it for our professional work. We want our students to get that training.”

While many previous digital advances have been accessible only

to highly trained individuals, generative AI makes technology “easier for the average person to use”, says Qin, adding that the changes have been welcomed on campus.

“We see this as an equaliser, rather than a divider,” he explains.

Qin is just nine months into his tenure as president of Lingnan. The new digital direction for the university was identified by the council before his appointment, and he was deemed a fitting choice to lead the strategy. He certainly seems to tick all the boxes: he is a world-leading data scientist, originally from mainland China, who spent 24 years in US academia before taking on leadership positions at two other Hong Kong institutions.

“Without the previous experience and understanding, it would be hard for me to figure out how to drive AI for the advantage of Lingnan,” he says.

Perhaps unsurprisingly given his expertise, Qin takes a data-driven approach to major strategic decisions – as well as more prosaic duties, such as managing staff complaints.

“If colleagues say they teach too much, I want to see the data. What’s the average teaching load, which means how many courses each professor teaches a year? Once we get

MIGUEL CANDELA/GETTY IMAGES

the data from different faculties, different departments, then you know whether they're teaching too many or too few [courses]," he says.

"For anything I want, there is data. Even for student homework, it's all archived electronically. So it is a lot easier to use data now to manage the university."

Qin has analysed figures on class sizes – an important metric for liberal arts universities, which tend to favour close interactions between academics and students. He was pleased to discover that there are just 21 students, on average, per class, particularly given that Hong Kong's public universities will soon be able to admit twice as many "non-local" undergraduate students. The government cap on non-locals will rise from the current 20 per cent to 40 per cent in September.

"If we want to add more students to each class, it's not going to create a huge problem for us," Qin explains. "We have room to make it a little bigger and still be healthy."

Last year, Lingnan won the Student Recruitment Campaign of the Year prize at the *Times Higher Education Awards Asia*, for an initiative that helped it to reverse a downward trend in student applications prior to 2020. Its campaign included the development of "Ling-

Space" – a chatbot game that provides prospective students a preview of its learning experience and replicates the university campus in a virtual environment.

However, not all liberal arts institutions would be feeling buoyant about the prospect of increasing enrolments at a time when there is a wider trend towards STEM programmes.

Some have even argued that liberal arts education cannot survive in Asia, following the closure of Yale-NUS College in 2021 (the National University of Singapore has since formed NUS College, focusing on interdisciplinary education).

However, Qin says, Asia is still the "growing area" for liberal arts education globally, whether at a stand-alone university or a college within a larger institution.

And he believes that the acceleration of generative AI makes liberal arts education even more relevant.

"A lot of the skills-based training will actually be largely replaced by AI," he says, citing simultaneous interpretation as one profession that will "disappear".

"However, it's the critical thinking that one would need."

Still, he recognises that that

view is not necessarily widely held, even today.

"Especially in China, the first thing that parents worry about is whether their kids can get a job. They still think that studying STEM would give them a good job. But I don't think the future is supporting that," he says. "Where you used to need 10 computer programmers, now you probably just need one... That one surviving [programmer] might use AI a lot, and [they] will need to know whether the AI-generated content is suitable."

While Qin is not worried about the future of the liberal arts, he is concerned about ensuring that younger generations continue to receive a rigorous education, so they gain the expertise and the values necessary to work effectively with AI.

"For us as adults, we have already established a knowledge system within an area, [and] we can use it [to] judge whether generated content is good or not. But imagine...a primary school kid – they don't know whether something is trustworthy or just nonsense," he says.

"We still need to have a rigorous learning process to bring up kids with a traditional value system. That process cannot be escaped." ●

admission@saveetha.com

SIMATS excels in providing quality education and research opportunities in the field of Medical and Technical Sciences. With state-of-the-art facilities and experienced faculty, SIMATS fosters innovation and prepares students for real-world challenges.

The Research Cell at SIMATS stands as a premier Research Centre, housing cutting edge instruments like
South Asia's first Nano CT system.
India's first 0.5nm ultra high-resolution Field Emission Scanning Electron Microscope.
Tamil Nadu's first White Light Laser Confocal Microscope with live cell incubation setup and many more.

Our facility utilised by Global clientele
including Texas A&M University, USA, Edelweiss Dentistry, Austria, University Hospital Basel, Switzerland, Jazan University, King Saud University, Majmaah University from Saudi Arabia, University Sains Malaysia.
Many other prestigious universities across India such as IITs, AIIMS, Delhi, Maulana Azad Institute of Dental Sciences.

Our services are also utilized by R & D sectors of giant corporate companies such as
ITC India, GE Electronics, Reynolds from Newells, USA and many more.

Research Cell at SIMATS is an all-in-one platform and it is an ultimate destination for all research needs.

'Our work gets into the world'

UTS' Andrew Parfitt tells Rosa Ellis about impact via partnerships, divestment and lifting Indigenous enrolments

People might imagine that consistently securing a high position in *Times Higher Education's* Impact Rankings means an institution has deliberately focused its activities around the United Nations' Sustainable Development Goals. That, however, is not the approach that has made the University of Technology Sydney a fixture in the tables. It may seem counter-intuitive, given that the rankings are based on the SDG framework, but as Andrew Parfitt, the UTS vice-chancellor and president, explains, starting with a broader outlook has allowed the institution to focus on areas where staff have expertise and passion.

Although UTS is a big institution, it is "not comprehensive", says Parfitt, which is why its strategy has been led by the skills and interests of its people rather than the SDGs. "[We] build on areas of strength, harnessing big challenges that people are passionate about."

A large part of the university's work on climate change comes out of the Institute for Sustainable Futures, a transdisciplinary centre. As one of the earliest research institutes at UTS, it works closely with businesses and government to develop "deep research partnerships" and has "built up over time quite a reputation for real policy impact", says Parfitt.

Those deep relationships that have influenced policy were enabled, in part, by what Parfitt describes as a "porous campus". Some private companies are based at UTS, often attracted by the presence of the most up-to-date technology and equipment – such as a vault

that enables secure analysis for sensitive data, biologics facilities and a "data arena", which allows 3D visualisation of information.

"We have a really strong strategy of engaging through our campus facilities with industry partners across a whole range of different sectors," Parfitt says. This, he believes, enables partnerships that are better able to tackle sustainability problems.

"When multiple partners come in to tackle bigger problems, we're also able to effectively generate value and leverage the soft infrastructure that's needed for those partnerships – because partnerships don't happen by accident," he says. "I think at least a part of why some of our work is really having an impact or making a difference is that it gets out to the real world pretty quickly."

Where universities put their money can be a fraught subject, with students and staff often putting pressure on administrators to invest institutional funds ethically. UTS went on a journey of divestment from fossil fuels. Initially, it tried to influence its fund managers to shift their investment priorities towards more ethical products, but it eventually switched funds. What can others learn from this?

Be really clear about your time frame, Parfitt says, and communicate well from the outset. His institution had to establish a deadline by which it would switch funds if its original one did not look set to divest from fossil fuels, to make sure that it did not lose the support of the university community.

Parfitt also advises watching for

signs that the fund is listening – or not. "When you cease to see the steps along the way, then you're getting a clear signal that things are probably not going to change, or they're not changing in the time frame that you want."

When it comes to equality – which is covered most comprehensively by SDGs 5 (gender equality) and 10 (reduced inequalities) – an important issue for Australian universities is equal opportunities for Indigenous peoples. Indigenous Australians make up 3.7 per cent of the country's population but only 1.5 per cent of university completions, and there has been a push to ensure greater access.

Parfitt admits that "we underperform in terms of our Indigenous student numbers", although he claims that UTS' success rate is higher than the sector average. To tackle the issue, he has a bold plan. "We're fundraising and also looking for a partner to help build a First Nations College – a residential college, so that we have a place that people can come to." Situated adjacent to campus, the college will house 250 students, as well as services unique to Indigenous students.

"It will be the first time that we'll have a college where First Nations students will welcome others on to the territory, rather than us welcoming them on to our campus. So it's kind of turning that paradigm around," Parfitt says, explaining that the idea came from the First Nations community at UTS.

"It's not cheap, as you can imagine," he adds. "But nothing that really makes generational change is going to be cheap." ●

“When you cease to see the steps along the way, you're getting a clear signal that things are probably not going to change”

'A silencing effect...fear': EDI under fire in the US

Anti-EDI laws in the US have hit staff, students and scholars, but HE leaders are mobilising. Meanwhile, peers abroad watch warily, writes Rosa Ellis

The university sector has been integral to the world's progress towards equality, but now, particularly in the US, some aspects of that work are under attack.

When former US president Donald Trump signed an executive order banning federal contractors from conducting racial sensitivity training in September 2020, it gave a boost to the previously fringe anti-diversity movement. Then, in 2023, Republicans began introducing legislation that limits diversity efforts within universities, prohibiting universities in certain states from having equity, diversity and inclusion (EDI) offices, providing mandatory diversity training, using diversity statements in hiring or promotion, and considering race, sex, ethnicity or national origin in admissions or employment.

At the time of going to press, 85 bills have been introduced and 14 have become law. There are at least 12 states with anti-EDI laws aimed at higher education (usually called DEI in North America), and seven where they could soon be approved.

Along with the Supreme Court ruling rejecting the use of race-based considerations in college admissions and the ousting of Harvard University's first black president, the anti-EDI movement is well and truly established.

"We've not been confronted in the 21st century with the kind of resistance that we're facing right now," says Paulette Granberry Russell, president of the US' National Association of Diversity Officers in Higher Education. She says that her members in states with anti-EDI laws are losing their jobs.

Universities are having to do a "strange dance", she adds. "How do you navigate legislation that threatens funding for your institution versus your mission, commitment and values you've espoused that represent the success of all students?"

Eden King is Lynette S. Autrey professor of psychology at Rice University in Texas, which last year introduced a law banning public universities from having EDI offices and staff, creating diversity statements, providing mandatory diver-

sity training and giving preferences based on characteristics such as race or sex in hiring and admissions.

"I am in a private institution, which is why I can talk to you about it and study this topic without fear of retribution," Dr King says. "Over 40 people have been laid off from [EDI] positions at the University of Texas...If your job has 'diversity' in the title, best case is they're taking that out of your title; worst case is you're being laid off."

The bans are affecting staff who work to make universities more inclusive, students from diverse backgrounds and academics studying diversity.

"I've talked to peers who are afraid to study these topics, who are worried for their students, who are concerned about the need to change their curricula. There's a silencing effect. And there's fear," Dr King says.

"It's not just words on a bill," adds Ms Granberry Russell. "These are lives that are directly impacted."

The *Times Higher Education* Impact Rankings tables on SDG 5

GETTY IMAGES MONTAGE

called Education for All in February last year. It has grown from five college presidents to about 200.

“We’ve got people and institutions in different kinds of contexts. So there’s different ways to resist the anti-DEI movement,” Dr Gavin says. “What we’re trying to do is provide concrete action and tools that can be offered in those different contexts, especially by presidents or their cabinets or board members.”

The group has produced videos in which students explain the impact of not having access to EDI initiatives. They also provide sociological readings of the impending bills to be given to lawyers.

In some cases, what the bills say is benign, but there is still a “chilling effect”, says Dr Gavin. Meanwhile, some “anti-DEI folks have learned that their language and its ambiguity, or sometimes its concreteness, has been potentially benign, so now they’re refining it in different ways” to cause more damage, he adds.

Experts agree that the laws will have a detrimental effect on diversity in higher education. Tia Brown McNair, vice-president for diversity, equity and student success at the American Association of Colleges and Universities, says it will take time to reverse the laws, and “students and educators from diverse backgrounds will feel the impact for years to come”.

Even in states without such legislation, those working on EDI are concerned. Stefanie Johnson is an associate professor of organisational leadership and information analytics at the University of Colorado Boulder. “In Colorado, I think we’re pretty committed to maintaining DEI in higher ed, but it’s something I still think about. Even in programmes at our university, I’m thinking twice about making sure that there’s no miscommunication about how the programmes are run,” she says.

Dr McNair agrees that the attacks on diversity “have heightened awareness among educators at all institutions, regardless of where they are located”.

What about beyond the US? Eddy Ng, Smith professor of equity and inclusion at Queen’s University in Canada and editor of the journal *Equality, Diversity and Inclusion*, says the research field of diversity broadly “feels under attack”.

In Europe, anti-EDI sentiment

exists, but “it’s more at the level of sort of isolated incidents”, according to Karin Gilland Lutz, deputy head of the Office for Gender Equality and Diversity at the University of Zurich and co-chair of the EDI group within the League of European Research Universities (Leru).

Gavan Titley, professor of media studies at Maynooth University in Ireland, says that, in the UK, the uproar around the removal of statues linked to colonialism can be seen as a small-scale version of the same sentiment.

However, there are concerns that attacks on diversity might become more frequent or more severe outside the US, and diversity experts in the UK are closely following the situation across the pond.

According to Femi Otitolu, an EDI consultant in the UK higher education sector, the US situation has “made people a little bit nervous”.

And Tim Soutphommasane, chief diversity officer at the University of Oxford, suggests there is good reason for that, as “there’s no doubt such work has its critics here in the UK”. He recently co-authored a study, along with UCL Policy Lab and non-profit organisation More in Common, that examined British public opinion on EDI. While the research found that most Britons support EDI initiatives, 28 per cent said it led to more unfair outcomes, suggesting that anti-diversity sentiment sometimes portrayed in the media has got some foothold in the UK.

Pete Quinn, a diversity consultant who has worked with several UK higher education institutions, says he is keeping an eye on the situation in the US, especially the rhetoric being used: “You’re always looking at the US for what may be coming...This [UK] government and people aligned with it do use [the same] tropes,” he says.

Many experts are especially worried about the impact of no longer teaching the value of diversity.

For Professor Ng, “when you teach DEI, it actually creates a positive change in students’ attitudes and values”.

“I think that’s critical,” he says. “It leads to more positive experiences – people are much more interested in improving the lives of others. That’s what the United Nations’ Sustainable Development Goals are all about, right?” ●

“You’re always looking at the US for what may be coming...This [UK] government and people aligned with it do use [the same] tropes”

(gender equality) and SDG 10 (reduced inequalities) ask universities to provide evidence of various measures relating to student access, women’s progress and discrimination, including, for SDG 10, the existence of a diversity and equality committee, office or officer.

Thirty of the 35 US universities ranked for SDG 10 this year received full marks for that indicator, based on data from 2022, meaning there was public evidence that such a committee or officer existed at the institution. Only one US institution, Texas A&M University, said it did not have a diversity and equality committee, office or officer. But that number might rise in the wake of the anti-EDI laws, threatening US universities’ performance in the table in future years.

Kimberly Barrett, a diversity consultant based in Wisconsin, who previously worked at universities, says one way to see the anti-EDI sentiment is as “a backlash to the collective response that the world had to the murder of George Floyd”.

There is a backlash to the backlash, however: college leaders are mobilising. Michael Gavin, president of Delta College in Michigan, started a coalition of presidents

Fuelling innovation in environmental science research

The Macau University of Science and Technology brings together interdisciplinary research and innovative strategies to bolster global sustainability initiatives

Achieving sustainability may be contingent on global support but regional breakthroughs serve as important catalysts in the pursuit. The Macau University of Science and Technology has long understood the importance of combining the local and the global in its research. Situated on the west coast of the Greater Bay Area, the Macao Special Administrative Region is experiencing rapid development, yet has many regional challenges to overcome, including problems around water management and air quality.

“The world faces a number of sustainability challenges, such as population growth, rampant urbanisation and climate change,” explains Joseph Hun-wei Lee, the university’s president. “Environmental science research is needed now more than ever to tackle these challenges – in the Greater Bay Area and all over the world.”

Established in 2015, the Macao Environmental Research Institute (MERI) demonstrates the university’s efforts in addressing regional and global environmental issues by promoting environmental science research and sustainable initiatives. The MERI facilitates high-level research programmes for local and international academics in areas such as environmental pollution, risk analysis of the Pearl River estuary and environmental quality standards and risk assessments for Guangdong, Hong Kong and Macao.

“Sustainable development cuts across many fields,” Lee says. “The MERI is concerned with using research to solve problems, whether they are social, economic or environmental.” These could be broad, global challenges – such as tackling the problem of climate change – or smaller-scale public health issues such as determining whether tap water in the area is currently safe for consumption.

One example of important environmental research carried out at the Macau University of Science and Technology

Joseph Hun-wei Lee,
vice-chancellor and president
of the Macau University of
Science and Technology

is an early warning system for storm surges. The Pearl River Delta region is particularly susceptible to coastal flooding. Researchers at the MERI have been developing a digital twin solution to create a more effective early warning system that guards against urban flooding.

The MERI is supported by the National Observation and Research Station of Coastal Ecological Environments in Macao, which is the first national-level field station in Hong Kong and Macao. Established in March 2022, the station has greatly enhanced the university's research on environmental protection and the prevention of pollution and coastal zone degradation.

"If you want to address issues like air quality or climate change, you need data," Lee notes. "Without data, you cannot carry out scientific research. The Greater Bay Area is a great example of this." There have been several studies on the eastern side of the delta, where a raft of useful environmental data was collected. The same cannot be said of the western side of the delta where Macao is located, he says.

Resolving this lack of data is part of the rationale behind the observation and research station, says Lee. The research team at the MERI recognises that collecting high-quality environmental data depends on the use of extremely accurate tools. The institute uses advanced tools and cutting-edge technologies such as the Internet of Things and remote sensors powered by artificial intelligence (AI).

"Whatever field we are researching, we try to collect accurate, detailed data. If you understand the cause of an issue, you can prescribe corrective measures," Lee continues. "For instance, it's long been known that the air quality in Macao is negatively impacted by high levels of ozone. Now we have the data to explain this."

Lee adds that the Macau University of Science and Technology conducts research on other environmental challenges, such as solid waste management, and has established a college specifically geared towards conducting research into microplastics. The university's Institute for Sustainable Development was founded in 2002 and conducts studies on Macao's economic, social and public policies to contribute to the region's development. "We have a broad group of people working in various fields and we frequently collaborate with key institutes in mainland China to continue expanding our knowledge base."

This collaborative approach is evident in some of the international forums hosted by the university. For example, in 2023, the university held the China-Portugal Forum on Coastal Environment and Innovative Technology for Sustainable Development (CPCET 2023) to connect academic and industry leaders from the Greater Bay Area and mainland China with

National Observation and Research Station of Coastal Ecological Environments in Macao

international experts and partners. Discussions at the forum focused on advances in coastal resilience projects, probabilistic tsunami hazard assessments and smart city innovations.

In 2024, the university hosted the International Forum on Sustainable Coastal Engineering and Environment (SCEE 2024). The event showcased the latest developments in coastal engineering and served as the inaugural event of the Macao Marine Engineering and Environmental Research Center, which opened on 31 May 2023. As with CPCET 2023, the forum attracted participants from industry and academia from the Greater Bay Area and beyond.

"At the Macau University of Science and Technology, we have two main focuses: interdisciplinarity and internationalisation," explains Lee. "We are committed to innovation, which is why so much of our research on sustainability leverages AI. We will continue to pursue environmental research using the latest technologies to deliver positive outcomes locally and globally."

These initiatives exist in harmony with the university's long-term goals for promoting environmental research to address the most pressing challenges of our age. In the 24 years since it was established, the university has witnessed remarkable development and attracted a significant amount of external sponsorship. The university is committed to continuing its efforts to foster innovation in the fields of environmental science and sustainable development.

"We hope to engage further with stakeholders across society," says Lee. "To achieve this, we need more government support, especially for our most cutting-edge research. Some of our interdisciplinary work has little precedent in Macao – or the world." Lee believes that the university's research projects deserve more recognition from industry and government and have the potential to achieve the impact needed to safeguard the long-term prosperity of Macao, the Greater Bay Area and the planet.

Empowering universities to achieve their sustainability goals.

THE's SDG Impact Dashboard, now entering its fifth year, has become a vital tool for sustainability work, providing universities with rich data on performance and insight into best practice from around the world.

With it, universities can track their year-on-year performance in THE's Impact Rankings across four years of data to help shape and drive successful strategy.

Innovating a Sustainable World: Macao Polytechnic University's AI-empowered Interdisciplinary Research

Macao Polytechnic University (MPU) is at the forefront of leveraging artificial intelligence (AI) and interdisciplinary research to drive sustainable development and contribute to the SDGs. With its AI+ strategy, MPU has established itself as a leading institution in applying AI across various domains and addressing global challenges. The university's rector, Marcus Im, envisions a future where technology plays a pivotal role in driving sustainable development worldwide.

Marcus Im, a visionary leader with a strong academic background in computing and information technology, has been instrumental in shaping MPU's sustainable development initiatives. Under his guidance, the university has embraced AI as a transformative force and a catalyst for innovative solutions of sustainability. "Our mission is to steer towards a sustainable future with technologies as our driver, fostering interdisciplinary innovation that benefits all," says Im. By integrating AI across disciplines, MPU takes a multifaceted approach to contribute to the SDGs, including but not limited to the environment, economy, education, healthcare, and society.

MPU's AI + Environment initiative integrates technological research and big data analytics into its sustainability practices for environmental conservation. One notable project is Canarin, a cloud-based real-time environmental monitoring solution implemented in partnership with five organizations across four countries. Canarin is being used for cultural heritage conservation and environmental protection, such as at the 300-year-old Joanina Library of the University of Coimbra in Portugal. It collects environmental big data to provide insights for decision-makers, addressing the issue of delayed or incorrect responses that can lead to damage to cultural heritage. This project not only demonstrates its tangible contribution to sustainable cultural preservation but also cultivates students' problem-solving skills and mindsets in tackling environmental issues.

Furthermore, the university is actively involved in optimizing green technologies R&D to contribute to sustainable cities through international collaboration. In 2023, MPU and the University of

Coimbra in Portugal established the "MPU-UC Joint Research Laboratory in Advanced Technologies in Smart Cities". This partnership aims to develop advanced technologies for building smart cities and furthering sustainable urban development. One of the collaborative projects focuses on optimizing the performance of electric vehicle batteries through AI-based research, reducing battery degradation and promoting sustainable transportation.

MPU has made significant strides by integrating AI and its over a century of experience in teaching and research in Chinese-Portuguese translation, thus enabling the transnational sharing of educational resources, fostering cross-cultural exchange and socio-economic development between China and Portuguese-speaking countries. The establishment of the "Engineering Research Centre of Applied Technology on Machine Translation and Artificial Intelligence", with its development of the largest and most accurate Chinese-Portuguese parallel corpus, has facilitated advanced language translation and interpretation. This breakthrough has been utilized to develop innovative machine translation systems adopted by Macao government and more than 40 countries and regions worldwide. The university also cultivates high-quality bilingual talents by providing training programmes for teachers and offering scholarships to attract lusophone students. These initiatives successfully boost effective communication and engagement between China and Portuguese-speaking countries such as Brazil, Angola, and Mozambique, among others.

MPU's commitment to health and well-being is exemplified by developing AI-driven solutions that stimulate the evolution of the smart healthcare industry, particularly in the fields of drug discovery. The university established the "Centre for Artificial Intelligence Driven Drug Discovery" in 2022 to utilize AI technology for drug screening, design, and optimization, improving R&D efficiency and reducing costs. The applied research of AI in drug discovery holds the potential to accelerate the development of new drug pipelines, contributing to sustainable and accessible healthcare solutions. Furthermore, MPU has conducted in-depth collaborative research in AI + medical imaging diagnosis, including breast cancer detection, automated brain tumor segmentation, and fetal lung evaluation, advancing the development of new disease treatments.

Through its efforts in interdisciplinary research across intervarsity partnerships, MPU has demonstrated the transformative potential of AI in fostering a more sustainable and prosperous future for all.

MPU's Engineering Research Centre of Applied Technology on Machine Translation and Artificial Intelligence receives Medal of Merit – Education 2023 from Ho Iat Seng, the Chief Executive of the Macao SAR Government

Ao Ieong U, Secretary for Social Affairs and Culture of the Macao SAR Government, officiates the inauguration of the MPU-UC Joint Research Laboratory in Advanced Technologies for Smart Cities.

7-9 October 2024 Manchester, UK

Making a difference: The purpose of universities in a rapidly changing world

Join senior leaders and innovators from across higher education, government and industry at **The University of Manchester** to explore the social responsibility and the obligation of universities to make a real difference to people's lives.

Speakers include:

Nazir Afzal
Chancellor
The University of Manchester

Raquel Bernal
President,
University of the Andes, Colombia

Tony Chan
President
King Abdullah University of Science and Technology

Chris Day
Vice-chancellor and president
Newcastle University

Olive Mugendam
Former vice-chancellor
Kenyatta University

Karen O'Brien
Vice-chancellor and warden
Durham University

Methodology

The *Times Higher Education* Impact Rankings are the only global performance tables that assess universities against the United Nations' Sustainable Development Goals. We use carefully calibrated indicators to provide comprehensive and balanced comparisons across four broad areas: research, stewardship, outreach and teaching

Which SDGs are included?

There are 17 UN SDGs, and we are evaluating university performance on all of them.

Universities can submit data on as many of these SDGs as they are able. Each SDG has a series of metrics that are used to evaluate the performance of the university in that SDG.

Any university that provides data on SDG 17 and at least three other SDGs is included in the overall ranking.

As well as the overall ranking, we also publish the results of each individual SDG in 17 separate tables.

How is the ranking created?

A university's total score in a given year is calculated by combining its score in SDG 17 with its best three results on the remaining 16 SDGs. SDG 17 accounts for 22 per cent of the total score, while the other SDGs each carry a weighting of 26 per cent. This means that different universities are scored based on a different set of SDGs, depending on their focus. The score for the overall ranking is an average of the last two years' total scores.

The score from each SDG is scaled so that the highest score in each SDG in the overall calculation is 100 and the lowest score is 0. This is to adjust for minor differences in the scoring range in each SDG and to ensure that universities are treated equitably whichever SDGs they have provided data for.

The metrics for the 17 SDGs are included on the following pages.

Scoring within an SDG

Research metrics are derived from data supplied by Elsevier. For each SDG, a specific query has been created that narrows the scope of the metric to papers relevant to that SDG. This is supplemented by publications identified by artificial intelligence. As with the World University Rankings, we are using a five-year window between 2018 and 2022. The only exception is the metric on patents that cite research under SDG 9, which relates to the time frame in which the patents were published rather than the time frame of the research itself. The metrics chosen for the bibliometrics differ by SDG and there are always at least two bibliometric measures used.

Continuous metrics measure contributions to impact that vary continually across a range – for example, the number of graduates with a health-related degree. These are usually normalised to the size of the institution.

When we ask about policies and initiatives – for example, the existence of mentoring programmes – our metrics require universities to provide the **evidence** to support their claims. In these cases, we give credit for the evidence, and for the evidence being public. These metrics are not usually size normalised.

Evidence is evaluated against a set of criteria, and decisions are cross-validated where there is uncertainty. Evidence need not be exhaustive – we are looking for examples that demonstrate best practice at the institutions concerned.

Time frame

In general, the data used refer to the closest academic year to January to December 2022. The date range for each metric is specified in the full methodology document.

Exclusions

The ranking is open to any university that teaches at either undergraduate or postgraduate level. Although research activities form part of the methodology, there is no minimum research requirement for participation.

THE reserves the right to exclude universities that it believes have falsified data, or are no longer in good standing.

Data collection

Institutions provide and sign off their institutional data for use in the rankings. On the rare occasions when a particular data point is not provided, we enter a value of zero.

The methodology was developed in conjunction with our partners Vertigo Ventures and Elsevier, and after consultation and input from individual universities, academics and sector groups.

See the full methodology at www.timeshighereducation.com/world-university-rankings/impact-rankings-2024-methodology

1 NO POVERTY

This ranking focuses on universities' research on poverty and their support for poor students and citizens in the local community.

Metrics

Research on poverty (27%)

- Field-weighted citation index of papers related to poverty (10%)
- Number of publications related to poverty (10%)
- Proportion of all research papers co-authored with low- or lower-middle-income countries (7%)

This focuses on research that is relevant to poverty. The field-weighted citation index is a subject-normalised score of the citation performance of publications. The third indicator measures the proportion of publications where one or more co-author is associated with a university that is based in a low- or lower-middle-income country.

The data are provided by Elsevier's Scopus dataset, based on a query of keywords associated with SDG 1 (no poverty). The dataset includes all indexed publications between 2018 and 2022. The data are normalised across the range using Z-scoring.

Proportion of students receiving financial aid (27%)

This indicator measures the proportion of a university's students who receive significant financial aid in order to attend the institution because of poverty.

It is based on data for full-time equivalent students across both undergraduate and postgraduate courses in the 2022 academic year. The data were provided directly by universities and normalised across the range using Z-scoring.

University anti-poverty programmes (23%)

- Targets to admit students who fall into the bottom 20% of household income in the country (4.6%)
- Graduation/completion targets for students who fall into the bottom 20% of household income in the country (4.6%)
- Support for students from poorest families to enable them to complete university – for example, in relation to food, housing, transport, legal services (4.6%)
- Programmes to assist students who fall into the bottom 20% of household income in the country to successfully complete their studies (4.6%)
- Schemes to support poor students from low- or lower-middle-income countries – for example, offering free education or grants (4.6%)

The evidence was provided directly by universities, evaluated and scored by *THE* and not normalised.

Community anti-poverty programmes (23%)

- Education or resources to assist the start-up of sustainable businesses in the local community – for example, mentorship programmes, training workshops, access to university facilities (5.75%)
- Financial assistance to aid the start-up of sustainable businesses in the local community (5.75%)
- Training or programmes to improve access to basic services for all (5.75%)
- Participate in policymaking at a local, regional, national and/or global level to implement programmes and policies to end poverty (5.75%)

The programmes can be community-led but they must be supported by the university.

The evidence was provided directly by universities, evaluated and scored by *THE* and not normalised.

2 ZERO HUNGER

This ranking focuses on universities' research on hunger, their teaching on food sustainability and their commitment to tackle food waste and address hunger among students and local communities. Hunger is defined as a severe lack of food, causing suffering or death.

Metrics

Research related to hunger (27%)

- Proportion of research papers in the top 10 per cent of journals as defined by Citescore (10%)
- Field-weighted citation index of papers (10%)
- Number of publications (7%)

This focuses on research that is relevant to hunger. The field-weighted citation index is a subject-normalised score of the citation performance of publications.

The data are provided by Elsevier's Scopus dataset, based on a query of keywords associated with SDG 2 (zero hunger). The data include all indexed publications between 2018 and 2022 and are normalised across the range using Z-scoring.

Campus food waste (15.4%)

- Campus food waste tracking (7.7%)
- Campus food waste per person (7.7%)

Institutions are given a higher score for the first indicator if the amount of food waste is measured across the whole university. The second indicator is based on data for the full-time equivalent campus population in the 2022 academic year.

The evidence for these indicators was provided directly by universities and was normalised.

Student hunger (19.2%)

- Programme on student food insecurity (4.8%)
- Interventions to target hunger among students and staff – for example, provide access to food banks (4.8%)
- Sustainable food choices for all on campus, including vegetarian and vegan food (4.8%)
- Healthy and affordable food choices for all on campus (4.8%)

The evidence was provided directly by universities, evaluated and scored by *THE* and not normalised.

Proportion of graduates in food sustainability (19.2%)

This metric measures the proportion of graduates who receive a degree associated with any aspect of food sustainability within an agricultural or aquacultural course, out of the institution's total number of graduates.

The data were provided directly by universities and normalised across the range using Z-scoring.

National hunger (19.2%)

- Provide food security and sustainable agriculture and aquaculture knowledge, skills or technology to local farmers and food producers (4.8%)
- Events for local farmers and food producers to connect and transfer knowledge (4.8%)
- Access to university facilities to local farmers and food producers to improve sustainable farming practices (4.8%)
- Prioritise purchase of products from local, sustainable sources (4.8%)

The evidence was provided directly by universities, evaluated and scored by *THE* and not normalised.

3 GOOD HEALTH AND WELL-BEING

This ranking focuses on universities' research on the key conditions and diseases that have a disproportionate impact on health outcomes across the world, their support for healthcare professions, and the health of students and staff. It is not a general measure of a university's medical teaching and research.

Metrics

Research on health and well-being (27%)

- Proportion of research papers that are viewed or downloaded (10%)
- Proportion of research papers that are cited in clinical guidance (10%)
- Number of publications (7%)

This focuses on research that is relevant to key diseases and conditions, measuring paper views, clinical citations and the volume of research produced.

The data are provided by Elsevier's Scopus dataset, based on a query of keywords associated with SDG 3 (good health and well-being). The data include all indexed publications between 2018 and 2022 and are normalised across the range using Z-scoring.

Proportion of health graduates (34.6%)

In order to understand how a university is supporting health professions, we measure the proportion of graduates who receive a degree associated with a health-related profession out of the institution's total number of graduates.

The data relate to the number of graduates in the 2022 academic year. The degree does not necessarily give them the ability to practise directly; additional qualifications may be required. The data were provided directly by universities and normalised across the range using Z-scoring.

Collaborations and health services (38.4%)

- Smoke-free policy (8%)
- Collaborations with local, national or global health institutions to improve health and well-being outcomes (7%)
- Outreach programmes in the local community to improve health and well-being, including those for displaced or refugee communities (7%)
- Access to sexual and reproductive health services for students (7%)
- Mental health support for students and staff (7%)
- Community access to university sports facilities (2.4%)

We asked universities for evidence of local health collaborations and community outreach programmes. We also asked for evidence that local residents could access university sports facilities and that the university provided sexual health support to students and mental health support for staff and students.

The evidence was provided directly by universities, evaluated and scored by *THE* and not normalised.

4
QUALITY
EDUCATION

This ranking focuses on universities' contribution to early years and lifelong learning, their research on quality education and their commitment to inclusive education. It should not be used to assess a university's overall quality of teaching.

Metrics

Research on early years and lifelong learning education (27%)

- Proportion of research papers that are viewed or downloaded (10%)
- Proportion of research papers in the top 10 per cent of journals as defined by Citescore (10%)
- Number of publications (7%)

The data are provided by Elsevier's Scopus dataset, based on a query of keywords associated with SDG 4 (quality education). The data include all indexed publications between 2018 and 2022 and are normalised across the range using Z-scoring.

Proportion of graduates with a teaching qualification (15.4%)

This measures the proportion of graduates who receive a degree that would enable them to teach at primary school level in their country. The data relate to the number of graduates in the 2022 academic year.

The data were provided directly by universities and normalised across the range using Z-scoring.

Lifelong learning measures (26.8%)

- Free access to educational resources for those not studying at the university (5%)
- Educational activities that are open to the general public, such as lectures or specific courses (5%)
- Educational events that provide vocational training for those not studying at the university (5%)
- Educational outreach activities in the local community, including schools (5%)
- Policies to ensure that these activities are open to all, regardless of ethnicity, religion, disability, immigration status or gender (6.8%)

The evidence was provided directly by universities, evaluated and scored by *THE* and not normalised.

Proportion of first-generation students (30.8%)

This is defined as the number of students starting a degree who identify as being the first person in their immediate family to attend university, divided by the total number of students starting a degree. All data are provided as full-time equivalents.

The data were provided directly by universities and normalised across the range using Z-scoring.

5
GENDER
EQUALITY

This ranking focuses on universities' research on the study of gender equality, their policies on gender equality and their commitment to recruiting and promoting women. The SDG itself phrases this explicitly as supporting women.

Metrics

Research (27%)

- Proportion of a university's total research output that is authored by women (10%)
- Proportion of papers on gender equality in the top 10 per cent of journals as defined by Citescore (10%)
- Number of publications on gender equality (7%)

The data are provided by Elsevier's Scopus dataset and based on a query of keywords associated with SDG 5 (gender equality). The data include all indexed publications between 2018 and 2022. The gender of authors is estimated by Elsevier. The data are normalised across the range using Z-scoring.

Proportion of first-generation female students (15.4%)

This is defined as the number of women starting a degree who identify as being the first person in their immediate family to attend university, divided by the total number of women starting a degree. All data are provided as full-time equivalents.

The data were provided directly by universities and normalised across the range using Z-scoring.

Student access measures (15.4%)

- Systematically measure and track women's application rate, and acceptance or entry rate (1.6%)
- Policy addressing application, acceptance, entry and participation rates for female students (4.6%)
- Provision of appropriate women's access schemes, such as mentoring (4.6%)
- Encouraging applications in areas where women are under-represented (4.6%)

The evidence was provided directly by universities, evaluated and scored by *THE* and not normalised.

Proportion of senior female academics (15.4%)

This is defined as the number of women in senior roles, divided by the total number of senior roles in the university. Senior roles can include professorships, deanships and senior university leaders. It does not include honorary positions. All data are provided as full-time equivalents.

The data were provided directly by universities and normalised across the range using Z-scoring.

Proportion of women receiving degrees (11.5%)

This is defined as the number of women who are awarded a degree, divided by the total number of students who are awarded a degree. The data are provided as headcounts and subject-weighted against three broad areas: STEM; medicine; and arts, humanities and social sciences.

The data were provided directly by universities and normalised across the range using Z-scoring.

continued

Women's progress measures (15.3%)

- Policy of non-discrimination against women (1.95%)
- Policy of non-discrimination against transgender people (1.95%)
- Maternity and paternity policies that support women's participation (1.9%)
- Accessible childcare facilities for students (1.9%)
- Accessible childcare facilities for staff (1.9%)
- Women's mentoring schemes in which at least 10 per cent of students participate (1.9%)
- Track women's graduation rate compared with men's and scheme in place to close any gap (1.9%)
- Policy protecting those reporting discrimination (1.9%)

The evidence was provided directly by universities, evaluated and scored by *THE* and not normalised.

6 CLEAN WATER AND SANITATION

This ranking focuses on universities' research related to water, their water usage and their commitment to ensuring good water management in the wider community.

Metrics

Research on clean water and sanitation (27%)

- Proportion of papers in the top 10 per cent of journals as defined by Citescore (10%)
- Field-weighted citation index of papers (10%)
- Number of publications (7%)

This focuses on research that is relevant to clean water and sanitation. The field-weighted citation index is a subject-normalised score of the citation performance of publications.

The data are provided by Elsevier's Scopus dataset and based on a query of keywords associated with SDG 6 (clean water and sanitation). The dataset includes all indexed publications between 2018 and 2022. The data are normalised across the range using Z-scoring.

Water consumption (19%)

- Water consumption tracking (9.5%)
- Water consumption per person (9.5%)

This is defined as the volume of water used per person on campus per year. It includes water used by students and employees and is based on full-time equivalents. Institutions are given a higher score for the first indicator if the amount of treated and extracted water used is measured across the whole university. If it does not measure this value, it cannot score for the second indicator.

The data were provided directly by universities and normalised across the range using Z-scoring.

Water care (23%)

- Process to treat wastewater (4.6%)
- Process to prevent polluted water entering water system (4.6%)
- Free drinking water for students, staff and visitors (4.6%)
- Building standards to minimise water use (4.6%)
- Plant landscapes to minimise water usage (4.6%)

The evidence was provided directly by universities, evaluated and scored by *THE* and not normalised.

Water reuse (12%)

- Policy to maximise water reuse across university (6%)
- Measure the reuse of water across university (6%)

The evidence was provided directly by universities, evaluated and scored by *THE* and not normalised.

Water in the community (19%)

- Educational opportunities for local communities to learn about good water management (3.8%)
- Promote conscious water usage on campus and in wider community (3.8%)
- Support water conservation off campus (3.8%)
- Sustainable water extraction technologies on associated university grounds on and off campus (3.8%)
- Cooperate with local, regional, national or global governments on water security (3.8%)

The evidence was provided directly by universities, evaluated and scored by *THE* and not normalised.

7 AFFORDABLE AND CLEAN ENERGY

This ranking focuses on universities' research related to energy, their energy use and policies, and their commitment to promoting energy efficiency in the wider community.

Metrics

Research on affordable and clean energy (27%)

- Proportion of papers in the top 10 per cent of journals as defined by Citescore (10%)
- Field-weighted citation index of papers (10%)
- Number of publications (7%)

This focuses on research that is relevant to affordable and clean energy. The field-weighted citation index is a subject-normalised score of the citation performance of publications.

The data are provided by Elsevier's Scopus dataset and based on a query of keywords associated with SDG 7 (affordable and clean energy). They include all indexed publications between 2018 and 2022. The data are normalised across the range using Z-scoring.

Clean energy measures (23%)

- Policy to ensure all renovations or new builds follow energy efficiency standards (3.85%)
- Plans to upgrade existing buildings to higher energy efficiency rating (3.85%)
- Process for carbon management and reducing carbon dioxide emissions (3.85%)
- Plan to reduce overall energy consumption (3.85%)
- Reviews to identify areas where energy waste is highest (3.8%)
- Policy on divesting from carbon-intensive energy industries, notably coal and oil (3.8%)

The evidence was provided directly by universities, evaluated and scored by *THE* and not normalised.

Energy use (27%)

This is defined as the energy used per floor space (gigajoules/m²) of university buildings. It measures units of energy used by an individual, event, organisation or product at the university.

The data were provided directly by universities and normalised across the range using Z-scoring.

Energy and the community (23%)

- Programmes for local community to learn about the importance of energy efficiency and clean energy (4.6%)
- Promote public pledge on 100 per cent renewable energy beyond the university (4.6%)
- Services aimed at improving energy efficiency and clean energy for local industry (4.6%)
- Inform and support governments on policy development related to clean energy and energy-efficient technology (4.6%)
- Assistance for start-ups that foster and support a low-carbon economy or technology (4.6%)

The evidence was provided directly by universities, evaluated and scored by *THE* and not normalised.

8 DECENT WORK AND ECONOMIC GROWTH

This ranking focuses on universities' role as engines of economic growth and their responsibilities as employers. It explores institutions' economic research, their employment practices and the share of students taking work placements.

Metrics

Research on economic growth and employment (27%)

- Proportion of papers in the top 10 per cent of journals as defined by Citescore (14%)
- Number of publications (13%)

This focuses on research that is relevant to economic growth and employment.

The data are provided by Elsevier's Scopus dataset, based on a query of keywords associated with SDG 8 (decent work and economic growth). The data include all indexed publications between 2018 and 2022. The data are normalised across the range using Z-scoring.

Employment practices (19.6%)

- Payment of a living wage to staff and faculty (2.45%)
- Recognition of union and labour rights (2.45%)
- Policy on ending discrimination in the workplace (2.45%)
- Policies against modern slavery, forced labour, human trafficking and child labour (2.45%)
- Guarantees of equal rights for outsourced labour (2.45%)
- Policy on pay scale equity and gender pay gaps (2.45%)
- Measure and track pay scale gender equity (2.45%)
- Processes for employees to appeal decisions on rights and/or pay (2.45%)

The evidence was provided directly by universities, evaluated and scored by *THE* and not normalised.

Expenditure per employee (15.4%)

This metric is calculated by dividing the university expenditure by the number of employees. It is then normalised by the regional GDP per capita. It aims to explore the extent to which the university is a significant economic driver locally.

The data were provided directly by universities and normalised across the range using Z-scoring.

Proportion of students taking work placements (19%)

To understand if universities are preparing students for the world of work, we asked for the number of students with an employment placement of more than a month required as part of their studies, divided by the total number of students. All data are provided as full-time equivalents.

The data were provided directly by universities and normalised across the range using Z-scoring.

Proportion of employees on secure contracts (19%)

The casualisation of the university workforce is a growing concern, so we asked universities to supply the number of employees (both academic and non-academic) on contracts of more than 24 months, divided by the total number of employees. All numbers are provided as full-time equivalents. This explicitly excludes short-term contracts required to cover for maternity or paternity leave.

The data were provided directly by universities and normalised across the range using Z-scoring.

9 INDUSTRY, INNOVATION AND INFRASTRUCTURE

This ranking focuses on universities' role of fostering innovation and serving the needs of industry. It explores institutions' research on industry and innovation, their number of patents and spin-off companies and their research income from industry.

Metrics

Research on industry, innovation and infrastructure (11.6%)

This focuses on research that is relevant to industry, innovation and infrastructure, measuring the volume of research produced.

The data are provided by Elsevier's Scopus dataset, based on a query of keywords associated with SDG 9 (industry, innovation and infrastructure). The data include all indexed publications between 2018 and 2022 and are normalised across the range using Z-scoring.

Patents (15.4%)

This is defined as the number of patents that cite research conducted by the university.

The data are provided by Elsevier and relate to patents published between 2018 and 2022 (not research published between these dates). Patents are sourced from the World Intellectual Property Organisation, the European Patent Office, and the patent offices of the US, the UK and Japan. The data are normalised across the range using Z-scoring.

University spin-offs (34.6%)

University spin-offs are defined as registered companies set up to exploit intellectual property that has originated from within the institution. This metric looks at spin-offs that were established on or after 1 January 2000. They must have been established at least three years ago and still be active.

The data were provided directly by universities and normalised across the range using Z-scoring.

Research income from industry (38.4%)

This metric reflects the ability of the university to generate new research income and is also used in the *THE* World University Rankings. It measures the amount of research income an institution earns from industry (adjusted for PPP), scaled against the number of academic staff it employs.

The data are subject-weighted against three broad areas: STEM; medicine; and arts, humanities and social sciences. This is normalised by the number of full-time equivalent staff in each area. The data were provided directly by universities and normalised across the range using Z-scoring.

10 REDUCED INEQUALITIES

This ranking focuses on universities' research on social inequalities, their policies on discrimination and their commitment to recruiting staff and students from under-represented groups.

Metrics

Research on reduced inequalities (27%)

- Proportion of papers in the top 10 per cent of journals as defined by Citescore (10%)
- Field-weighted citation index of papers produced by the university (10%)
- Number of publications (7%)

This focuses on research that is relevant to reduced inequalities. The field-weighted citation index is a subject-normalised score of the citation performance of publications.

The data are provided by Elsevier's Scopus dataset, based on a query of keywords associated with SDG 10 (reduced inequalities). The data include all indexed publications between 2018 and 2022. The data are normalised across the range using Z-scoring.

First-generation students* (15.5%)

This measures the number of students starting a degree who identify as being the first among their immediate family to attend university, divided by the total number of students starting a degree. All data are provided as full-time equivalents.

Students from developing countries* (15.5%)

Defined as the proportion of international students at all degree levels from low-income and lower-middle-income countries, as defined by the World Bank, and who are significantly supported by financial aid.

Proportion of students and staff with disabilities* (23%)

Defined as the number of students or employees with disabilities, divided by the total number of students or employees.

* The data were provided directly by universities and normalised across the range using Z-scoring.

Measures against discrimination (19%)

- Non-discriminatory admissions policy (1.9%)
- Track application and admission rates of under-represented groups (1.9%)
- Planned action to recruit students and staff from under-represented groups (1.9%)
- Anti-discrimination and anti-harassment policies for staff and students (1.9%)
- The existence of a diversity and equality committee or officer (1.9%)
- Provide mentoring or other support programmes aimed at students and staff from under-represented groups (1.9%)
- Accessible facilities for people with disabilities (1.9%)
- Support services for people with disabilities (1.9%)
- Access schemes for people with disabilities (1.9%)
- Accommodation policy or strategy for people with disabilities, including adequate funding (1.9%)

In 2022, "newly settled refugees" was added to our definition of under-represented groups.

The evidence was provided directly by universities, evaluated and scored by *THE* and not normalised.

11 SUSTAINABLE CITIES AND COMMUNITIES

This ranking looks beyond the traditional view of sustainability as being about stewardship of resources to examine the role of a university in sustaining and preserving the heritage of communities. It explores institutions' research on sustainability, their role as custodians of arts and heritage and their internal approaches to sustainability.

Metrics

Research on sustainable cities and communities (27%)

- Proportion of papers in the top 10 per cent of journals as defined by Citescore (10%)
- Field-weighted citation index of papers produced by the university (10%)
- Number of publications (7%)

This focuses on research that is relevant to sustainable cities and communities. The field-weighted citation index is a subject-normalised score of the citation performance of publications.

The data are provided by Elsevier's Scopus dataset, based on a query of keywords associated with SDG 11 (sustainable cities and communities). The data include all indexed publications between 2018 and 2022. The data are normalised across the range using Z-scoring.

Support of arts and heritage (22.6%)

- Public access to buildings and/or monuments or natural heritage landscapes of cultural significance at the university (3.75%)
- Public access to university libraries (3.75%)
- Public access to university museums and collections (3.75%)
- Public access to open and green spaces (3.75%)
- Provide artistic events for members of the public, such as concerts (3.8%)
- Record and preserve local heritage (3.8%)

The evidence was provided directly by universities, evaluated and scored by *THE* and not normalised.

Expenditure on arts and heritage (15.3%)

This measures the proportion of total university expenditure spent directly on arts and heritage, excluding spending on sports facilities.

The data were provided directly by universities and normalised across the range using Z-scoring.

Sustainable practices (35.1%)

- Targets around sustainable commuting (3.9%)
- Promote sustainable commuting (3.9%)
- Encourage telecommuting, remote working or condensed working weeks (3.9%)
- Provide affordable housing for students and staff (7.8%)
- Provide priority to pedestrians on campus (3.9%)
- Work with local authorities on planning issues (3.9%)
- Build to sustainable standards (3.9%)
- Build on brownfield sites (3.9%)

The evidence was provided directly by universities, evaluated and scored by *THE* and not normalised.

12 RESPONSIBLE CONSUMPTION AND PRODUCTION

This ranking focuses on the efficient use of resources and minimising waste. Universities must play their part in ensuring that their consumption is minimised, especially where resources are not renewable.

Metrics

Research on responsible consumption and production (27%)

- Proportion of papers in the top 10 per cent of journals as defined by Citescore (10%)
- Field-weighted citation index of papers produced by the university (10%)
- Number of publications (7%)

This focuses on research that is relevant to responsible consumption and production. The field-weighted citation index is a subject-normalised score of the citation performance of publications.

The data are provided by Elsevier's Scopus dataset, based on a query of keywords associated with SDG 12 (responsible consumption and production). The data include all indexed publications between 2018 and 2022. The data are normalised across the range using Z-scoring.

Operational measures (26.7%)

- Policy on ethical sourcing of goods (4.8%)
- Policy on the appropriate disposal of hazardous waste (4.8%)
- Policy to measure amount of waste sent to landfill and amount recycled (4.8%)
- Policy on minimising the use of plastics (4.8%)
- Policy on minimising the use of disposable items (4.8%)
- Evidence that these policies also apply to outsourced services (1.35%)
- Evidence that these policies also apply to outsourced suppliers (1.35%)

The evidence was provided directly by universities, evaluated and scored by *THE* and not normalised.

Proportion of recycled waste (27%)

- Measure the amount of waste generated and recycled across the university (13.5%)
- Proportion of waste recycled (13.5%)

The first indicator gives higher scores if the amount of waste generated and recycled is measured across the whole university. If universities do not measure this across the university, they cannot score for the second indicator. The data were provided directly by universities and normalised across the range using Z-scoring.

Publication of a sustainability report (19.3%)

We asked whether the institution published a university sustainability report between 2020 and 2022 and whether this was a stand-alone document or part of a larger annual report. Publication of a sustainability report is a direct requirement of SDG 12 by the United Nations.

The evidence was provided directly by universities, evaluated and scored by *THE* and not normalised.

13 CLIMATE ACTION

This ranking explores universities' research on climate change, their use of energy and their preparations for dealing with the consequences of climate change.

Metrics

Research on climate action (27%)

- Proportion of papers in the top 10 per cent of journals as defined by Citescore (10%)
- Field-weighted citation index of papers produced by the university (10%)
- Number of publications (7%)

This focuses on research that is relevant to climate action. The field-weighted citation index is a subject-normalised score of the citation performance of publications.

The data are provided by Elsevier's Scopus dataset, based on a query of keywords associated with SDG 13 (climate action). The data include all indexed publications between 2018 and 2022. The data are normalised across the range using Z-scoring.

Low-carbon energy use (27%)

- Measure the amount of low-carbon energy used (13.5%)
- Proportion of electricity from low-carbon sources (13.5%)

The first indicator gives higher scores if the amount of low-carbon energy used is measured across the whole university. The second indicator measures the amount of energy used from low-carbon sources as a proportion of total energy used in gigajoules (GJ). It includes both energy generated by the university and energy purchased by the university.

The data were provided directly by universities and normalised across the range using Z-scoring.

Environmental education measures (23%)

- Provide local education programmes or campaigns on climate change (4.6%)
- Existence of a university climate action plan shared with local government and community group (4.6%)
- Work with local or national government to plan for climate change disasters that may include the displacement of people (4.6%)
- Inform and support government on issues associated with climate change (4.6%)
- Collaborate with NGOs on climate adaptation (4.6%)

Carbon neutrality (23%)

- Commitment to carbon neutrality (11.5%)
- Achieve by date (11.5%)

The first indicator asks whether the university has a target date by which it will become carbon neutral, according to the Greenhouse Gas Protocol, and the second indicator asks when carbon neutrality for both Scopes 1 and 2 is expected to be achieved (or whether it has already been achieved). Higher scores are given for the first indicator if the target includes all three scopes.

The evidence was provided directly by universities, evaluated and scored by *THE* and not normalised.

14 LIFE BELOW WATER

This ranking explores universities' research on life below water and their education on and support for aquatic ecosystems.

Metrics

Research on life below water (27%)

- Proportion of papers in the top 10 per cent of journals as defined by Citescore (10%)
- Field-weighted citation index of papers produced by the university (10%)
- Number of publications (7%)

This focuses on research that is relevant to life below water. The field-weighted citation index is a subject-normalised score of the citation performance of publications.

The data are provided by Elsevier's Scopus dataset, based on a query of keywords associated with SDG 14 (life below water). The dataset includes all indexed publications between 2018 and 2022. The data are normalised across the range using Z-scoring.

Education related to aquatic ecosystems (15.3%)

- Educational programmes on fresh-water ecosystems for local or national communities (5.1%)
- Educational or outreach programmes on sustainable management of fisheries, aquaculture and tourism for local or national communities (5.1%)
- Outreach activities to raise awareness about overfishing, unregulated fishing and destructive fishing practices (5.1%)

The evidence was provided directly by universities, evaluated and scored by *THE* and not normalised.

Supporting aquatic ecosystems (19.4%)

- Support or organise events aimed to promote conservation and sustainable use of bodies of water (4.85%)
- Policy to ensure that seafood on campus is sustainably harvested (4.85%)
- Maintain and extend existing ecosystems and their biodiversity, either through research or engagement with industry (4.85%)
- Work on technologies or practices to help marine industry prevent damage to aquatic ecosystems (4.85%)

The evidence was provided directly by universities, evaluated and scored by *THE* and not normalised.

Water-sensitive waste disposal (19.3%)

- Water quality standards and guidelines for water discharges (6.45%)
- Plan to reduce plastic waste on campus (6.45%)
- Policy preventing and reducing marine pollution (6.4%)

The evidence was provided directly by universities, evaluated and scored by *THE* and not normalised.

Maintaining a local ecosystem (19%)

- Plan to minimise physical, chemical and biological alterations of aquatic ecosystems (3.8%)
- Monitor health of aquatic ecosystems (3.8%)
- Develop and support programmes and incentives that encourage good aquatic stewardship (3.8%)
- Collaborate with local community to maintain shared aquatic ecosystems (3.8%)
- Watershed management strategy based on diversity of aquatic species (3.8%)

The evidence was provided directly by universities, evaluated and scored by *THE* and not normalised.

15

LIFE
ON LAND

This ranking explores universities' research on life on land and their education on and support for land ecosystems.

Metrics

Research on life on land (27%)

- Proportion of papers in the top 10 per cent of journals as defined by Citescore (10%)
- Field-weighted citation index of papers produced by the university (10%)
- Number of publications (7%)

This focuses on research that is relevant to life on land. The field-weighted citation index is a subject-normalised score of the citation performance of publications.

The data are provided by Elsevier's Scopus dataset, based on a query of keywords associated with SDG 15 (life on land). The dataset includes all indexed publications between 2018 and 2022. The data are normalised across the range using Z-scoring.

Education related to land ecosystems (23%)

- Support or organise events aimed to promote conservation and sustainable use of land (4.6%)
- Policy to ensure that food on campus is sustainably farmed (4.6%)
- Maintain and extend existing ecosystems and their biodiversity (4.6%)
- Educational programmes on ecosystems for local or national communities (4.6%)
- Educational programmes or outreach on sustainable management of land for agriculture and tourism (4.6%)

The evidence was provided directly by universities, evaluated and scored by *THE* and not normalised.

Supporting land ecosystems (27%)

- Policy to ensure the conservation, restoration and sustainable use of land ecosystems associated with the university (5.4%)
- Policy to identify, monitor and protect threatened species affected by the operation of the university (5.4%)
- Include local biodiversity in any planning and development processes – for example, construction of new buildings (5.4%)
- Policy to reduce impact of non-native species on campus (5.4%)
- Collaborate with local community to maintain shared land ecosystems (5.4%)

The evidence was provided directly by universities, evaluated and scored by *THE* and not normalised.

Land-sensitive waste disposal (23%)

- Water quality standards and guidelines for water discharges (7.7%)
- Policy on reducing plastic waste on campus (7.65%)
- Policy on waste disposal, covering hazardous materials (7.65%)

The evidence was provided directly by universities, evaluated and scored by *THE* and not normalised.

16

PEACE, JUSTICE
AND STRONG
INSTITUTIONS

This ranking focuses on how universities can support strong institutions in their countries and promote peace and justice. It explores universities' research on law and international relations, their participation as advisers to government and their policies on academic freedom.

Metrics

Research on peace and justice (27%)

- Proportion of papers in the top 10 per cent of journals as defined by Citescore (10%)
- Field-weighted citation index of papers produced by the university (10%)
- Number of publications (7%)

This focuses on research that is relevant to peace and justice. The field-weighted citation index is a subject-normalised score of the citation performance of publications.

The data are provided by Elsevier's Scopus dataset, based on a query of keywords associated with SDG 16 (peace, justice and strong institutions). The data include all indexed publications between 2018 and 2022. The data are normalised across the range using Z-scoring.

University governance measures (26.6%)

- Elected representation on the university's governing body (3.35%)
- Recognition of an independent students' union (3.35%)
- Policies to engage local stakeholders (3.35%)
- Participatory bodies to engage local stakeholders (3.35%)
- Policies on organised crime, corruption and bribery (3.35%)
- Policies supporting academic freedom (6.6%)
- Publication of university financial data (3.25%)

The evidence was provided directly by universities, evaluated and scored by *THE* and not normalised.

Working with government (23.2%)

- Provide expert advice to government (6.4%)
- Provide outreach to policy- and lawmakers (6.4%)
- Undertake policy-focused research in collaboration with government departments (6.4%)
- Provide a neutral platform for political stakeholders to discuss challenges (4%)

The evidence for these metrics was provided directly by universities, was evaluated and scored by *THE* and was not normalised.

Proportion of graduates in law and civil enforcement (23.2%)

Universities can support justice through the provision of appropriately educated graduates, so we measured the number of graduates in law or civil policing subjects divided by the total number of graduates. All courses must include a positive ethical dimension. The data relate to the number of graduates in the 2022 academic year.

The data and evidence were provided directly by universities. The data were normalised across the range using Z-scoring.

17

PARTNERSHIPS
FOR THE GOALS

This ranking looks at the broader ways in which universities support the SDGs through collaboration with other countries, the promotion of best practices and the publication of data. Unless all partners work together towards the SDGs, they cannot be achieved.

This is the only compulsory SDG for inclusion in the overall rankings. It is also worth a smaller proportion of the final score in the overall table.

Metrics

Research (27.1%)

- Proportion of academic publications with co-author from lower- or lower-middle-income country (13.55%)
- Number of publications that relate to the 17 SDGs (13.55%)

The data are provided by Elsevier's Scopus dataset and normalised across the range using Z-scoring. The data include all indexed publications between 2018 and 2022.

Relationships to support the goals (18.5%)

- Relationships with regional NGOs and government for SDG policy (3.7%)
- Cross-sectoral dialogue about SDGs with government or NGOs (3.7%)
- Collaborating internationally to capture data relating to SDGs (3.7%)
- Working internationally to develop best practice on tackling SDGs (3.7%)
- Collaborating with NGOs to tackle SDGs through student volunteering programmes, research programmes or educational resources (3.7%)

The evidence was provided directly by universities, evaluated and scored by *THE* and not normalised.

Publication of SDG reports (27.2%)

We asked institutions whether they published specific data on their performance against each of the 17 SDGs. We gave extra credit for documents that are in the public domain.

Education on the SDGs (27.2%)

- Commitment to meaningful education around the SDGs across the university, relevant and applicable to all students (9.06%)
- Dedicated courses (full degrees, or electives) that address sustainability and the SDGs (9.06%)
- Dedicated outreach educational activities for the wider community, which could include alumni, local residents, displaced people (9.06%)

The evidence was provided directly by universities, evaluated and scored by *THE* and not normalised.

Sustainable business

The eco agenda won't be advanced unless it is built into business curricula, says Alison Taylor, who shares how to prepare tomorrow's industrial leaders

Amid societal and political turbulence, business school leaders are facing profound challenges over how to incorporate rising sustainability pressures into their operations and curricula.

The traditional approach has been to offer elective courses for students who are passionate about the topic, while leaving the mainstream financial, accounting, marketing and leadership classes relatively untouched. This siloed approach is now running into trouble, both in corporations and in business schools.

Here's how to think differently.

1. Embrace and discuss tensions and trade-offs

The era of "have-your-cake-and-eat-it" sustainability is over. Broad arguments that sustainability practices will inevitably boost your bottom line and social licence to operate have hit a wall in the face of mounting pressure over greenwashing, increased regulatory pressures and the anti-ESG (environmental, social and governance) backlash.

Rather than teaching sustainability in a cheerleading way, it is important to highlight trade-offs, discuss tensions between breadth and depth, and get serious about governance questions regarding where sustainability teams sit and their remit. This will prepare students to navigate the real-life challenges facing organisations.

2. Prioritise negotiation and coalition-building skills

Today, corporations face huge challenges over their remit and role in society. Even MBA students have been expressing scepticism about capitalism, and there are typically a huge range of values and opinions within any corporation. This means preparing students to navigate a world where they must build coalitions and drive influence across political divides, but must also prioritise individual free will and human dignity and respect. Preparing students to handle fraught conversations about ethics and values is a must.

3. Treat sustainability as a 'minor' for all students

There is little consistency in how corporations treat sustainability: some view it as risk management, others as innovation, others as marketing or compliance. Relatedly, many sustainability teams focus exclusively on messaging and reporting, not core strategic challenges. Now that the low-hanging fruit has been picked, there are pressing questions about how to truly integrate sustainability considerations.

The leaders of the future should focus on depth in a particular business discipline, but also ensure that they have facility and confidence on sustainability topics. In other words, sustainability is an essential "minor", whatever your primary expertise.

4. Work with businesses on real-life challenges

Sustainability poster children have far less to teach students than companies wrestling with real-life challenges over decarbonisation, shifting consumer demand, supply chain oversight and employee activism. It can be difficult to find real-time opportunities to expose students to these practical dilemmas, but it is essential.

In my classes, students form project teams and create strategies for companies facing existential strategic dilemmas. This enables them to explore one company deeply, while also gaining exposure to just how varied the issues are across sectors and geographies.

5. Get serious about corporate political responsibility

The business-as-usual approach has long been to highlight sustainability achievements in glossy reports, while marketing, HR and government relations teams proceed with little regard to these claims. This is now untenable. Taking a stand on any issue now invites suspicion of hypocrisy and scrutiny as to whether your company's actions – and political spending – match your rhetoric. Corporations such as Uni-

lever are taking steps to align their policy positions with their sustainability goals. This is just one sign of the imperative to drive a holistic and consistent approach across internal functions. Students need to be educated about corruption, influence peddling, responsible tax and broad debates over the corporatisation of politics, because these pressures are not going away.

Business schools today have a responsibility to expose students to the full spectrum of dilemmas and opinions on the role and remit of the corporation in society. It can be useful to have exposure to a range of faculty opinions, and students should be encouraged to openly debate and discuss these high-risk questions, listen to their peers and consider what is at stake. Philosophy, social psychology and evolving legal frameworks are just as important as core sustainability tools, strategies and approaches. Rather than offering sustainability courses to the subset of students who are interested in them, we need to prepare our future business leaders to build coalitions and drive influence in a divided world. ●

Full speed ahead

Shared vision, ambitious goals, loud celebrations: Zoe Rodwell explains how Charles Sturt avoids complacency and keeps pushing for sustainability

In 2016, Charles Sturt University became Australia's first certified carbon-neutral university, 10 years after setting itself the goal. This sustainability milestone demonstrated to the global higher education sector that carbon neutrality was achievable, and that aspirational goal-setting could pave the way for enhanced institutional commitment towards sustainability.

Now, eight years on, what does Charles Sturt's commitment to sustainability look like? How does a university celebrate sustainability triumphs while not resting on its laurels, and refocus to, yet again, strive for great things?

To start with, a strong foundation and a shared vision have been crucial. Charles Sturt embraces and promotes an organisational ethos of "*yindyamarra winhanganha*", a Wiradjuri phrase meaning "the wisdom of respectfully knowing how to live well in a world worth living in". This philosophy underpins efforts and attitudes across the university and provides a framework for a shared pursuit of excellence. Sustainability has become far more than a catalogue of institutional objectives and goals. The united aspiration of safeguarding the future world contributes to organisational identity and directly impacts how staff approach our core business: teaching, research and connection with community.

While nurturing an appetite for sustainable improvement relies on the efforts of many, strong, empathetic leadership is particularly beneficial to establish goals, promote opportunities and foster collaboration. We have a dedicated sustainability team that leads action and accountability across the organisation, and this fixed point of determination has been key to many of our successes. This cross-campus team facilitates top-

down and bottom-up engagement via a structured process of annual consultation to ensure that all pockets of the university understand how they can contribute to a sustainable organisation.

University-wide engagement is created through Learning in Future Environments (LiFE) committees, environmental campus working groups, public events, the employment of student sustainability advisers and the constant fostering of cross-divisional partnerships. Our sustainability team is the driving force behind the institution's shared successes in working towards a sustainable future, including our 2030 Clean Energy Strategy targets. Staff are passionate about supporting others, and they use their knowledge and expertise to help teams and individuals identify

how sustainability is important to the areas they work in.

Using the UN's Sustainable Development Goals as a framework for conversations has refined communication around the concept of sustainability and its relevance, particularly among academic staff, and has contributed to positive shifts in teaching and research. Over time, the fostering of a shared curiosity about and a broader understanding of sustainability has produced dynamic partnerships that improve institution-wide energy efficiencies, share knowledge around everyday practice and develop campus biodiversity zones through habitat restoration and monitoring.

In recent years, the sustainability team has collaborated to oversee the supply of electricity from 100 per cent renewable energy for our campuses, the transition to a fleet of fuel-efficient vehicles and electric vehicles powered by renewable energy sources, the move towards on-site renewable energy generation and the planting of thousands of tree seed-

lings at community engagement events. Annual grant programmes support staff, students and the wider community by turning innovative sustainability ideas into reality. Grant funds have helped build campus pollinator gardens, subsidised bus hire fees for student clubs, facilitated education workshops with regional high schools and supported staff research projects to advance areas of resilience, waste reduction and sustainability in education.

Celebrating loudly, sharing successes broadly and engaging staff and students in hands-on participation are key to retaining momentum within a multi-campus, regional university setting. Impactful improvements rely on everyone to rally. Staff acknowledgement through internal communication, newsletters from the vice-chancellor and digital recognition cards applaud success while simultaneously increasing awareness of the many sustainability initiatives across our campuses. Community tree planting days, fauna spotlighting evenings, campus walk-and-talks, and student residential projects all increase participation among our people and communities.

Reflecting on our current position and future aspirations, Charles Sturt will continue to set targets, celebrate progress and show leadership via initiatives such as our clean energy strategy and our research strategy. These plans incorporate themes such as: prosperous digital and circular societies; climate-neutral agriculture, food and wine production; climate-proof rural and regional areas; and healthy, safe and sustainable communities.

Charles Sturt continues to invest in and model sustainability across all campuses and strives to develop agents of change through teaching and research. As Australia's leading regional university, the Charles Sturt community is connected by a shared vision and set of values. Sustainability is most definitely a shared responsibility, for we all endeavour to live in a world worth living in. ●

Getting the green stuff

Universities adopting green financing must undertake approaches that complement their institutions' overall strategies, says Anton Muscatelli

As universities embrace the transition to net zero, it is unsurprising to see more institutions adopting sustainable financing of their major infrastructure investments. The European Commission defines “sustainable financing” as the process of taking environmental (such as climate change mitigation or biodiversity), social (tackling inequality or inclusion) and governance, or “ESG” considerations, into account when making investment decisions, leading to more long-term investments in sustainable economic activity.

Borrowing associated with sustainability is an attractive option for universities, given the alignment with their strategic goals and the interests of students, staff and alumni. For universities with capital investment plans for green energy or net zero transitions, this form of borrowing makes sense. World Bank data show the global market for green, social and sustainability bonds (looking at both sovereign and sub-sovereign issuers) has grown from \$114 billion (£91 billion) in 2016 to \$948 billion in 2022 in terms of annual issuance.

Various borrowing instruments are applicable to funding university activities, from “sustainability bonds” and “sustainability-linked bonds” (or “sustainability loans”) to social bonds and green loans.

A useful distinction is between those bonds or private placements labelled as “sustainable”, where the focus is on the *use of proceeds*, and their equivalents that are “sustainability-linked”, where the university's *performance against organisational KPIs* affects the borrowing cost.

The use-of-proceeds approach requires universities to set out eligible projects based on compelling cases – for example, investment in renewables infrastructure against the United Nations' Sustainable Development Goals or for social impact. The selection of projects and how funds are used must follow principles set out by the International Capital Market Association. Recently we have seen

several institutions issuing long-term bonds (UCL's 40-year £300 million sustainable bond of 2021, for example, or the London School of Economics and Political Science's 50-year sustainability private placement). In practice, many projects funded by this borrowing are “green” rather than social projects (linked to renewable energy, sustainable water management or clean transportation, for example).

In contrast, “sustainability-linked” borrowing incentivises universities to meet certain targets for carbon emissions or energy use, and failure to meet these will increase the loan cost. In general, sustainability bonds or private placements have longer maturities, while sustainability-linked borrowing is over shorter periods of time.

But what are the main considerations for universities contemplating sustainable finance?

First, there are clearly reputational gains from aligning an institution's financing strategy to its sustainability strategy. It gains buy-in from stakeholders and imposes discipline in meeting the university's goals. However, sustainable finance is *not* a substitute for adopting a credible net zero plan for emissions: it is a means to that end. Students and staff are likely to care more about whether their institution has a credible plan to reduce emissions by a certain date (and the extent to which any verifiable offset projects are used), than whether the projects are labelled as “sustainable finance”. In 2023, the Financial Conduct Authority tightened regulations around the labelling of investment products as “sustainable” because of fears of “greenwashing”.

Similarly, universities must heed warnings that sustainable financial frameworks and associated projects must have verifiable outcomes. This requires strong governance around financial frameworks overseeing borrowing that are fully integrated into the overall institutional strat-

egy for sustainability/net zero.

Second, one cannot conclude that those universities that have not yet gone down the sustainable bonds or loans route are uninterested in sustainability. Internal financing reduces the need for external borrowing, and the recent increase in interest rates (yields on UK universities' public bonds have risen from 2 per cent or below in 2021 to about 4 per cent to 5 per cent in 2023) means those universities with stronger cash flow generation will want to wait before entering this market. In my view, we will not see a steady state of emerging university capital structures for another five to 10 years.

Third, there are other financial structures and instruments beyond purely borrowing. Those universities with land or capital assets that could be used for net zero (to generate renewable power, for instance) could look at shared ownership structures to raise investment funds and manage risks in projects.

Sustainable finance is undoubtedly a complex field. Universities must develop strong management expertise to navigate the intricacies of a still-evolving market. Above all, it requires robust internal governance to ensure financial strategy is complementary to overall institutional strategy, and not simply a bolt-on. ●

Sir Anton Muscatelli
Principal and vice-chancellor, University of Glasgow, and a professor of economics

“Universities must develop strong management expertise to navigate a still-evolving market”

MARTIN POPE/GETTY IMAGES

“ Our commitment to sustainability is guided by a comprehensive strategic plan with clear and measurable objectives ”

Giacomo Bergamini
Delegate for sustainability,
University of Bologna

Simona Tondelli
Deputy rector, University of Bologna

Ancient and modern

Giacomo Bergamini and Simona Tondelli share tips for embracing heritage at a centuries-old institution while working towards sustainable development

Founded in 1088, the University of Bologna (Unibo) is the oldest university in the Western world.

It was born as a university spread out across the city. Classes were taught wherever space was available – such as in churches and professors’ homes. The university was not a physical space, but rather a spontaneous and informal gathering of a few students.

In the following centuries, the university developed, maintaining a sprawling campus but establishing different faculties first within and then outside the historical city walls. Since 2000, Unibo has adopted a multi-campus structure, stretching beyond Bologna to the eastern part of the Emilia-Romagna region. There are now campuses in the cities of Cesena, Ravenna, Forlì and Rimini, which offer interdisciplinary study programmes and are hubs for research activity. In each of the four newer campuses, the dispersed nature of the university is preserved, with courses being taught in different buildings across the cities.

Today, Unibo’s activities are conducted in 256 buildings, across about 1 million square metres. The university is one of the largest public universities in Italy, with more than 88,000 students, 3,100 academics and 3,100 technical or

administrative staff. There are 31 departments, seven interdepartmental research centres for industrial research, 17 centres for education and research and more than 300 degree programmes.

How can a university with such history and tradition, and such a sweeping presence, embrace innovation and sustainability?

We believe that the answer is threefold:

- Capitalise on our cutting-edge research and teaching excellence to push the boundaries of knowledge and translate research into practical solutions for a more sustainable future
- Cultivate a culture of sustainability within our community, in which sustainable development is everyone’s responsibility
- Build strong partnerships with local and global organisations to share knowledge, resources and best practices.

Our commitment to sustainability is guided by a comprehensive strategic plan with clear and measurable objectives. This plan outlines 50 tangible goals that will be achieved through a number of specific actions hinged on four areas: teaching and student community, research, people, and society.

Among these objectives, one that

is particularly important, especially in light of the sociopolitical situation that has emerged in recent years, is that of energy procurement and management. In this regard, the university energy plan was approved last year, outlining intervention strategies to promote efficient energy use and enhance the social, economic and environmental sustainability of our activities. Starting from the status quo, the energy plan sets out a series of scenarios that prefigure the evolution of energy consumption in the short and medium term, and indicate the direction in which our university will have to move in the future to reduce gas emissions and increase the use of renewable sources.

Moreover, our sustainability report, published annually, is a fundamental tool for evaluating our commitment to sustainability. Through a detailed analysis of environmental, social and economic indicators, the report allows us to measure the progress we have made, understand the current status of our activities, and define the course for the future to achieve our desired goals.

We are confident that our efforts will not only benefit our own community but will also contribute to a more sustainable future for all. ●
